ALWAYS CHECK NOTICES TO AIRMEN SECTION

AIR NAVIGATION RADIO AIDS

INSACS = Interstate Airway Communications Station/s (CAA)

VHF OMNI-RANGE: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSACS. (C) The station identification is monitored continuously by the communicator at the associated INSACS. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSACS. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category I are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored soley through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSACS, and located too distant from INSACS to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180", indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . . . Approach Control Tower, CAA (transmits on voice channel of associated ranges and ILS in addition to frequencies listed)
B. . . . . Scheduled Broadcast Station (broadcasts weather at 15 and 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . . Control Tower, CAA
CT. . . . . Control Tower, (City, County, Private, etc.)
D. . . . . Distantly controlled
DME. . . . Distance Measuring Equipment
FM. . . . . VHF fan marker (100 watts)
GCA. . . . Ground Controlled approach system
H. . . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . . Instrument Landing System (voice on localizer channel)
J. . . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . . . VHF fan marker, low powered (5 watts)
LMM. . . Compass locator station when installed at middle marker site
LOM. . . . Compass locator when installed at outer marker site
LVOR. . . Low power VOR (with standby equipment)
MH. . . . Non-directional radio beacon (homing) power less than 50 watts
ML. . . . . Range (loop radiators), power less than 50 watts
MM. . . . VHF middle marker
MOR. . . . Low frequency omni-drectional range
MRA. . . . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . . . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . . . VHF outer marker
P. . . . . Point-to-Point radio
RA. . . . . Range (adcock, vertical radiators), power 150 watts or more
RL. . . . . Range (loop radiators), power 150 watts or more
S. . . . . Simultaneous range, homing and voice signals available. Inclusion suffix "W" indicates range and homing signals only
T. . . . . Teletype
TVOR. . . Low power VOR (no standby equipment) located on airport
TX. . . . . Principal teletype
V. . . . . Additional VHF voice feature on other than range frequency
VAR. . . . Visual-aural VHF range
VOR. . . . VHF omni-directional range (omni-range)
W. . . . . Without voice facilities on range frequency
Z. . . . . VHF station location marker at a range station

NOTES

1. Range courses are magnetic in-bearings
2. All CAA MH facilities operate continuously unless cited as follows: (on req)
3. All CAA ranges operate continuously. Those which are not manned continuously are cited in the remarks column with hours of operation in parentheses, e.g., (6-24)
4. VHF and LF/LMF ranges listed with the same identifier are controlled by the same INSACS. Due to space limitations the DTV and communication frequencies which are listed with the LF/LMF facility are not repeated with the VOR facility

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

RADAR AVAILABLE : How and Where

(3-23-54)

PAR = PRECISION APPROACH RADAR. ASR = AIRPORT SURVEILLANCE RADAR.
GCA = GROUND CONTROLLED APPROACH - MILITARY EQUIVALENT OF COMBINED ASR AND PAR EQUIPMENT. ARSR = AIR ROUTE SURVEILLANCE RADAR.

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway. The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

RADAR ARRIVAL AND DEPARTURE CONTROL - Radar is utilized by certain radar equipped facilities to control the flight paths of arriving or departing IFR aircraft for the purpose of expediting the flow of traffic. Aircraft operating on IFR flight plans will be afforded a minimum of three miles horizontal separation unless standard non-radar vertical, lateral or longitudinal separation exists. This should not be confused with Ground Controlled Approach (GCA) which is an instrument approach aid.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions; or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible.

Civil minimums at military installations established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

Navy units are prepared to transmit on HF from 2,000 to 18,000 kc and receive any frequency from 1,500 to 9,050 kc to aid any plane in emergency.

→ = New or revised data.

DIRECTORY OF AIRPORTS – LEGEND

CITY AND AIRPORT NAME

(AF) City and Airport Name (with C, L, M or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such activity thereon.

NOTE: Similar combinations of above citation of A, N, CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields, respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

NOTES:

1. Where lights are owned or maintained by CAA the site number and airway abbreviation are included in the city and airport name column ie: Chadron, 15, CYS-HON.
2. USAF aircraft are permitted to use only those fields prefixed with an AF, A, N, NG, CG, P, PC.
3. When city and airport names are identical, the airport name is omitted to conserve space.
4. When city is part of airport name, a dash will appear between city and airport, such as Venice-State.

TYPE

C - Commercial M - Municipal AF - Air Force
L - Limited P - Private

NOTES:

1. MUNICIPAL - Intended for general use by the public at large. The ownership and/or control is by the public (Federal, State, County, etc.). Aircraft services generally available. Public patronage is solicited.
2. COMMERCIAL - Intended for general use by the public at large. The ownership and/or control is non-public (individual or organization). Aircraft services generally available. Public patronage is solicited.
3. LIMITED - Intended for private use, but use by public at large is not prohibited. The ownership and/or control may be public or non-public. Patronage of public at large is not solicited. Responsibility for aircraft landings and take-offs not assumed by airport owner.
4. PRIVATE - General use by the public at large is prohibited. Use by specific authorization only.

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of referenced city to airport.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

LOCATION (Continued)

If orientation features are less than 1/2 mile from the field, distance is not specified.

ELEVATION

Elevation is given in feet above mean sea level and is based on highest usable portion of landing area.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

LONGEST RUNWAY AND FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, weather reports, and unicom available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet, using 70 as division point. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h -runway is paved (concrete, asphalt or similar type of paving)
aw -allway field
(20) -runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon)
(Green and white, split-beam and other types)
Omission of B indicates rotating light is either not available or not operating standard hours (sunset-sunrise)

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting
L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
1 - Portable lights (Electrical)
2 - Boundary
3 - Runway floods
4 - Runway or Strip
5 - Instrument approach (neon)
6 - High intensity runway
7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis indicates only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.
Any S combination in parenthesis-part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or CAA communications station on field.

UNICOM

U: Unicom (Aero Advisory Station transmitting and receiving on 122.8 mc). Operates during airport hours only.

FUEL OCTANE

F1: 80 oct., at least F3: 91/96 oct., and lower
F2: 80/87 oct., and lower F4: 100/130 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.
Any F combination without parenthesis indicates full time day attendant, in parenthesis part-time or irregular attendant.

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.
(b) "CLOSED" indicates closed to all traffic except in emergency.
(c) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.
(d) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.
(e) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.
(f) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.
(g) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

NOTES

1. → New or revised data.
2. SCHEDULED AIRLINE STOP: Airport names are capitalized.
3. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
4. NEW AIRPORTS: At the end of each state, under this listing will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

NOTICES TO AIRMEN

SPECIAL NOTICES

✓ Indicates New or Revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Information, Attention, W-52, CAA, Washington 25, D. C.)

Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

VHF INSACS-TO-PRIVATE AIRCRAFT CHANNELS: The national VHF channel for transmission from INSACS-to-private aircraft, 122.2 mc was partially implemented beginning August 1, 1951. (The companion aircraft-to-INSACS frequency is 122.1 mc). Eventually all INSACS will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACS which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call.

When an INSACS is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACS have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° of azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations, outer compass locators and fan markers).

Omniranges and outer compass locators where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification; e. g. Long Beach omni (voice) .-.. --. -... (LGB in Code).

At fan markers, the present tone identification (one dash, two dashes, etc.) is alternated with voice identification (e. g., "New Rochelle Fan"). Since these facilities are not listed in the ANRA pages, a list of fan markers where voice identification has been added follows:

Avon Lake, Ohio; Morgan Hill, Calif.; Smyrna, Ga.

NEW AIR TRAFFIC CLEARANCE PHRASEOLOGY ADOPTED: The phrase "VIA FLIGHT PLANNED ROUTE" has been adopted for use in air traffic clearances and may be used to replace the detailed description of any portion of the route of flight that is identical to the route filed by the pilot. IFR flight plans filed by pilots must contain the complete route of flight and must be relayed to air traffic control unchanged in order for this phraseology to be successfully used.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occurring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

✓ INTERCEPTION PATTERN FOR DAY-VISUAL IDENTIFICATION OF AIRCRAFT: The Air Defense Command advises that the "Interception Pattern for Day-Visual Identification of Aircraft", as published in the Flight Information Manual (Volume 7, Part 1, May 1953) page 101, has been modified to eliminate the initial pass ahead of the intercepted aircraft. The new procedure is graphically illustrated on page 88.

Attention is directed to the following excerpts from the text accompanying the new pattern:

"Fighter-interceptor pilots are ordered to make every effort to prevent startling the intercepted aircraft air crews or passengers.

Ordered intercepts are essential to the defense of the country and will continue as required. Close adherence to Part 620 of the Regulations of the Administrator by all pilots will minimize the necessity for intercepts. Deviations result in unknown or suspicious tracks on air defense radars and intercepts must be ordered for identification.

Pilots being intercepted must hold a steady course and altitude. The intercept pattern has been developed and interceptor pilots well trained in its use to identify aircraft without creating additional hazard. Taking evasive action precludes precise following of the intercept pattern and creates a collision hazard. Also, pilots are urged not to shine Aldis lamps or other lights into the interceptor cockpit at night, blinding the pilot and creating a hazard.

The Air Defense Command will investigate all reports of apparent flagrant disregard for the safety of intercepted aircraft on the part of interceptor pilots and take appropriate disciplinary action."

✓ LOCATION IDENTIFIERS: The following assignments and changes affect the use of location identifiers:

ATN	Antonito, Colo., Radiobeacon (Assignment)
BSI	Blairsville, Pa., REP (Reassignment)
GAF	Palmdale, Calif., Galbraith Field (Deletion)
LHV	Lock Haven, Pa., Lock Haven Airport (Reassignment)
LIX	Cleveland, Ohio, West Pierhead Light Station (Reassignment)
MPO	Mt. Pocono, Pa., Mt. Pocono Airport (Reassignment)
PNF	Point Marblehead, Ohio REP (Reassignment)
IV	Ivory Island, B. C. (Deletion)

(3-23-54)

✓ VOR RECEIVER CHECK SIGNALS: Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operation of the airborne system. These provisions consist of three different methods: (a) a radiated test signal consisting of a single radial; (b) certified check points on the airport surface; or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. The resultant indication should be either 0° or 180° (dependent upon the setting of the "To-From" indicator) with the omnibearing selector set at 0° and the flight path deviation indicator (FPDI) centered. Should the VOR receiver be of the automatic indicating type, the indication should be either 0° or 180° dependent upon the particular type of sensing designed into the receiver. Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of ± 4° be indicated through use of the ground check or ± 6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. Caution, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of Mar. 19, 1954, check points or facilities have been established at the following airports (listed under city name):

✓ CORRECTION TO AIRMAN'S GUIDE: Correct Airman's Guide, Volume 8, No. 26, dated March 9, 1954, as follows:

(1) Page 6. Under Non-Standard Holding Patterns, items (9) and (10) should read ETTER, MINN. INTERSECTION AND PRESCOTT, MINN. INTERSECTION, respectively.

✓ CORRECTION TO FLIGHT INFORMATION MANUAL: Correct Flight Information Manual, Part 1, dated May 1, 1953, page 18 by changing Windsor Locks, Conn., Bradley Field CAA teletphone number to NA 3-4981.

RADAR FLIGHT ASSISTANCE SERVICE: Effective April 1, 1954, radar flight assistance service will be available in the Fort Worth Flight Advisory Area to aircraft encountering severe weather conditions. This service may be obtained by requesting radar assistance through an appropriate ground station or direct ARTC communication. ARTC will determine if service can be provided and will request pilot to change to appropriate frequency for direct communication with radar. Radar station will be identified by "THIS IS AIR FORCE RADAR ADVISORY". All suggested vectors to circumnavigate storm areas will be of advisory nature and do not relieve pilot of responsibility for safety of aircraft. If advisory service cannot be furnished for any reason the procedure word "UNABLE" will be used. This will terminate radar advisory service to the aircraft without further explanation.

DANGER AREA DESIGNATIONS: The following Danger Area Amendment shall be effective as dated unless otherwise advised:

AMENDMENT NO. 73 TO PART 608 - DANGER AREAS
(April 9, 1954)

(1) In Section 608.27, the Presque Isle, Maine area (D-80) published on Sept. 7, 1951 in 16 F. R. 9070 and amended on Oct. 31, 1951 in 16 F. R. 11068, is further amended by changing the "Description by Geographical Coordinates" column to read: "Beginning at lat 47-00-00, long. 68-25-00; SW to lat 46-10-00, long. 68-43-00; W to lat 46-10-00, long. 70-08-00; NE to lat 47-00-00, long. 69-35-00, thence E to the point of beginning "and by changing the "Designated Altitudes" column to read: "3500' MSL to unlimited."

(2) In Section 608.14, the Antioch area (D-264) published on July 16, 1949 in 14 F. R. 4288 and amended on Oct. 14, 1950 in 15 F. R. 6908, and amended on Dec. 13, 1952 in 17 F. R. 11256, and on Nov. 10, 1953 in 18 F. R. 7056, is rescinded.

(3) In Section 608.52, the Carrington Island area (D-256), published on July 16, 1949 in 14 F. R. 4296, and amended on June 3, 1952 in 17 F. R. 4977, is rescinded.

MINIMUM EN ROUTE IFR ALTITUDES: Effective March 23, 1954, minimum en route IFR altitudes are amended as follows:

From	To	Min. Alt.
(1) Amber Civil Airway No. 3 is amended to read in part:		
Pueblo, Colo. (LFR)	Colorado Springs, Colo. (ILS/LOM)	8,000
Colorado Springs, Colo. (ILS/LOM)	Denver, Colo. (LFR)	8,900
(2) Red Civil Airway No. 14 is amended to eliminate:		
Lanesville (INT), Ky.	Godman AFB, Ky. (LF/RBN)	2,000
Godman AFB, Ky. (LF/RBN)	Upton (INT), Ky.	2,100
(3) Red Civil Airway No. 84 is amended to read in part:		
Meridian, Miss. (LFR)	Marion (INT), Ala.	2,000
Marion (INT), Ala.	Montgomery, Ala. (LFR) (Maxwell AFB)	1,500
(4) Blue Civil Airway No. 62 is amended to read in part:		
Flint, Mich. (LF/RBN)	Saginaw, Mich. (LF/RBN)	2,100
(5) Direct Routes - United States is amended by adding:		
*Bair (INT), Mo.	Kansas City, Kansas ILS Lclzr (Southbound)	2,500
*4,500' - Minimum receiption altitude		
(6) VOR Civil Airway No. 3 is amended to read in part:		
Kensington (INT), Md.	Lisbon (INT), Md.	*3,000
*2,000' - Minimum terrain clearance altitude		
Lisbon (INT), Md.	Parkton (INT), Md.	*3,000
*2,500' - Minimum terrain clearance altitude		
Parkton (INT), Md.	West Chester, Pa. (VOR)	*3,000
*2,000' - Minimum terrain clearance altitude		
(7) VOR Civil Airway No. 16 is amended to read in part:		
Montebello, Va. (VOR)	*Gordonsville, Va. (VOR)	6,000
*3,000' - Minimum corssing altitude at Gordonsville (VOR), W-bound		
(8) VOR Civil Airway No. 18 is amended to read in part:		
Jackson, Miss. (LFR) Direct or S alternate	Meridian, Miss. (LFR) Direct or S alternate	2,000
(9) VOR Civil Airway No. 39 is amended to read in part:		
*Gordonsville, Va. (VOR)	Herndon, Va. (VOR)	3,000
*3,000' - Minimum crossing altitude at Gordonsville (VOR), NE-bound		

ON-REQUEST REPORTING POINTS: Effective immediately the following on-request reporting points are established, cancelled or redesignated, as indicated:

CANCELLATION

(1) LANESVILLE, IND. INTSXN

REDESIGNATIONS

(2) SUMMIT INTERSECTION - intersection Allentown VOR radial over Chatham H facility with Caldwell VOR 150° true radial.

(3) PALOS VERDES INTERSECTION (VHF) - intersection of the south aural course of the Los Angeles, Calif., VAR and the 256° magnetic radial of the Long Beach, Calif. VOR.

(4) GULF INTERSECTION (VHF) - intersection of the 172° magnetic radial of the Long Beach, Calif. VOR and a 090° magnetic track to the Oceanside, Calif., RBN.

(5) PACIFIC INTERSECTION (VHF) - intersection of the 137° magnetic radial of the Long Beach, Calif. VOR and a 090° magnetic track to the Oceanside, Calif., RBN.

ESTABLISHMENTS

(6) BERRY INTERSECTION - intersection of the 342° magnetic radial of the Long Beach, Calif. VOR and the 304° magnetic radial of the Ontario, Calif., VOR.

(7) CORONA INTERSECTION (VHF) - intersection of the 079° magnetic radial of the Long Beach, Calif. VOR and the 165° magnetic radial of the Ontario, Calif. VOR.

(8) WILMINGTON INTERSECTION (VHF) - intersection of the 256° magnetic radial of the Long Beach, Calif. VOR and the south course of the Los Angeles, Calif. L/MF range.

(9) FERMIN INTERSECTION (VHF) - intersection of the south aural course of the Los Angeles, Calif. VAR and the 232° magnetic radial of the Long Beach, Calif. VOR.

(10) TERMINAL INTERSECTION (VHF) - intersection of the 232° magnetic radial of the Long Beach, Calif. VOR and the south course of the Los Angeles, Calif. L/MF range.

(11) PEORIA INTERSECTION - intersection of the 184° magnetic radial of the Bradford, Ill. omnirange and the 255° magnetic radial of the Pontiac, Ill. omnirange.

(12) BEACON (LAKE MICHIGAN) INTERSECTION - intersection of the 062° magnetic radial of the Naperville omnirange and the 355° magnetic radial of the Chicago Heights omnirange. Concurrently with this designation, the present Lake Shore (VOR) intersection is cancelled.

(13) PEABODY INTERSECTION - intersection Boston VOR en route radial to Kennebunk with Gardner VOR 092° true radial.

(14) DEDHAM INTERSECTION - intersection Boston VOR en route radial to Norwick with Gardner VOR 114° true radial.

(15) FORD INTERSECTION - intersection Pittsburgh VOR en route radial to Brookville with 267° true bearing to Butler H facility.

(16) ADMIRE INTERSECTION - intersection of the 216° magnetic radial of the Topeka, Kansas omnirange and the 354° magnetic radial of Emporia, Kansas omnirange.

(17) MAPLE HILL INTERSECTION - intersection of the 252° magnetic radial of the Topeka, Kansas omnirange and the northwest course of the Forbes Air Force Base low frequency range.

(18) WABASHA INTERSECTION - intersection 035° magnetic radial of Rochester, Minn. (VOR) and 295° course of the Minneapolis, Minn. ILS. (This corrects designation that appeared in Vol. 8, No. 26 of the Airman's Guide, dated February 23, 1954.)

FLIGHT ADVISORY AMENDMENT: Effective immediately the Pittsburgh Flight Advisory Area is revised to read: "Starting at the south edge of Pittsburgh-Cleveland Boundary Line on Victor 8, west along south edge of Victor 8 to and along east edge of Blue 81 to north edge of Victor 12."

NON-STANDARD HOLDING PATTERN: Effective immediately the following non-standard holding pattern is established:

COLTS NECK (VOR) STATION - show holding on Colts Neck VOR en route radial to Atlantic City.

CIVIL AIRWAY, CONTROL AREA, CONTROL AREA EXTENSION, CONTROL ZONE and REPORTING POINT AMENDMENTS: Effective April 13, 1954, civil airways, control areas, control area extensions, control zones and reporting points are amended in whole or in part as follows:

CIVIL AIRWAYS: (1) Amber Civil Airway No. 8 (Los Angeles, Calif. to The Dalles, Oregon) is amended by changing the first portion to read: "From the Los Angeles, Calif. radio range station via the intersection of the west course of the Los Angeles, Calif. radio range and the southeast course of the Camarillo, Calif. radio range; Camarillo, Calif. radio range station;"

(2) Red Civil Airway No. 13 (Wheeling, W. Va. to Boston, Mass.) is amended by changing the last portion to read: "Providence, R. I. radio range station to the intersection of a direct line between the Providence, R. I. radio range station and the Bedford, Mass. non-directional radio beacon with the west course of the Boston, Mass. radio range."

(3) Blue Civil Airway No. 75 (Cleveland, Ohio to United States-Canadian Border) is added to read: "That airspace over U. S. territory from the Cleveland, Ohio radio range station to the London, Ontario, Canada radio range station."

LEGEND

(3-31) • Month and day item was reported.
** • New or revised airport, danger area or miscellaneous data. Pilots should inscribe this information on charts and records.
* • New or revised radio data. Pilots should inscribe this information on charts and records.
NOTE: • Because of space limitation such items are cited only once. The erection or removal of radio station towers, water tanks, oil derricks and permanent airport obstructions are examples of material cited only once.

ALABAMA: ANNISTON-RADIO: VOR cmsnd as full time nav fac, all courses aligned within tolerance. Courses 360° clockwise to 070° not usable because of course bends and roughness. Min reception alt at 50 mi as follows: 300° clockwise to 070°; 4000'; 070° clockwise to 100°, 3500'; 100° clockwise to 180°, 3000'; 180° clockwise to 220°, 2000'; 220° clockwise to 300°, 2500' MSL. (3-23-54)

ALABAMA: BIRMINGHAM-RADIO: All arwy courses have mild to moderate roughness.
BIRMINGHAM ARPT-TOWER: Effect. April 19, apch ctl will utilize radar procedures to effect control and separation of arriving tfc destined for Birmingham Municipal Arpt. These procedures are described generally on Page 63, Part I of Flgt Info Manual. Standard non-radar separation will be provided to any acft if requested by pilot on first rdo ctc with apch ctl. (3-19) FLD: 150' temp twr erected adj to fld at lat 33-30-12, long. 86-45-12.
EVERGREEN-MIDDLETON FLD: Caution - vehicles and farm equip. intermittently crossing rnwys and using taxi strips.
HUNTSVILLE-RADIO: VOR radials clockwise 0-160° unusable-excessive course roughness. March 9, VOR shut down for approx 2 weeks. (3-11)
HUNTSVILLE ARPT: NE/SW rnwy lgts inop. (2-6)
MOBILE-RADIO: VOR flgt-checked on arwy radials only.
MONTGOMERY-DANNELLY FLD: Rnwy 3-21 open for lgt plane tfc only, during daylgt hrs from intsxn with E/W Taxiway to S/W end. Rnwy 15-33 open for lgt plane tfc only, during daylgt hrs from intsxn with Rnwy 3-21 to N/W end. Caution - area under const. (3-16)
MONTGOMERY-MAXWELL AFB-RADIO: USAF VHF/DF flgt-checked satisfactory. (3-15,
ARIZONA: CHANDLER-WILLIAMS AFB-RADIO: USAF VHF/DF steers unreliable on inbound headings 300° - 080° below 7000' beyond 40 mi from stn. (12-7)
DOUGLAS-BISBEE-DOUGLAS INTERNATIONAL ARPT: Pilots are cautioned to use maximum length of rnwys for landings and take-offs - due to obstructed view of ends. Take-offs from intersections of rnwys and taxiways prohibited.
GILA BEND-RADIO: VOR arwy radials flgt-checked at minimum instrument alt. Slow bends and scalloping starting at approx 30 to 35 mi on 247° radial and at 35 to 40 mi on 106° radial.
KINGMAN ARPT: Caution - intermittent target plane testing in vcnty. Rdo controlled acft operating in area NW of fld.
PHOENIX-LUKE AFB-RADIO: USAF VHF/DF unreliable inbound headings 340 - 300° counterclockwise below 8000' and 100 - 60° counterclockwise below 12,000'. (1-21)
PRESCOTT-RADIO: VOR radials 185 to 225° usable dist 40 mi at 10,000' MSL; 135 to 145° and 165 to 185° usable dist 45 mi at 10,000' MSL.
TUCSON-RADIO: Only VOR arwy radials flgt-checked. Coverage restricted at min terrain clearance alt by nearby mountainous terrain N, E and S. (8-28)
TUCSON-DASIS-MONTHAN AFB-RADIO: USAF UHF/DF unreliable 170-270° clockwise below 14,500' at 40 mi; unreliable at min en route alts all quads. (1-28) USAF VHF/DF lmtd in rng to 30 mi in quads containing inbound headings of 150-210° and 245-275°; rng 50 mi other quads; steers unreliable below 13,000' all quads. (12-23) USAF UHF/DF inop 0800-0900 each Wed. (2-3)
YUMA COUNTY ARPT: B-45 type acft towing 5000' of cable and tow target in vcnty. All acft refrain from flying in close proximity to B-45 type acft in Yuma area. (2-3) Men and hvy equip. working at apch end Rnwys 3 and 35, during daylgt hrs - extreme caution Apch lgt sys (low intensity) and boundary lgts have been removed from Rnwy 35 and replaced with flare pots, or flashing red lgts to mark a 15 inch drop-off at the apch end of Rnwy 35 - extreme caution. (2-5)
ARKANSAS: HARRISON ARPT: New NW/SE Rnwy under const. Fld clsd for ngt operns.
LITTLE ROCK-ADAMS FLD: Rnwy 4-22 clsd - resurfacing. (3-22)
TEXARKANA-RADIO: VOR 143° radial to rnwy 13 beyond tolerance due to roughness & bends.
WALNUT RIDGE-RADIO: VOR radials 290 - 320° and 120 - 150° have severe bends and course roughness.
CALIFORNIA: ARCATA ARPT: Experimental testing of rotating lgts in inner apch zone of Rnwy 31 at infrequent times. Rotating lgts at 2100' and 1000' S of threshold of rnwy with six high intensity lgts rotating at 6 or 12 rpm.
BAKERSFIELD-RADIO: VOR has slight to moderate scalloping in SE quad 80° to 123°. Radials 0, 90, 100, 130, 140, 150, 220, 270, 300 and 330° flgt-checked.
BLUE CANYON ARPT, 13, SFO-SLC: Closed - snow.
BRAWLEY ARPT: Equip. on Rnwy 9-27. (11-3)
CORNING ARPT: Strip unsafe - mud. (2-3)
CRESCENT CITY-RADIO: VOR arwy radials flgt-checked. Courses from 90 thru 330° usable dist 25 mi. From 330° thru 350° usable dist 60 mi at min instr alts. Courses 350° to 90° usable dist 30 mi at 7000' MSL; 50 mi at 8000' MSL. (6-22)
DAGGETT-RADIO: VOR 113.2 mc. Only arwy radials flgt-checked. (12-3)
FT. JONES-RADIO: VOR has lgt course roughness all quads. Only arwy radials flgt-checked.

CALIFORNIA: FORTUNA-RADIO: VOR has lgt to moderate scalloping beyond 30 mi. Only arwy radials flgt-checked.
FRESNO-AIR TERMINAL-TOWER: About Mar 22, ILS will be shut down for approx 7 days - modernization. (3-8)
GASQUET ARPT: N side of strip clsd - const.
KING CITY ARPT: Rnwy lgts inoperative. (3-10)
LONG BEACH-RADIO: Feb 8, DME and VOR voice ident feature only shut down. About April 15, BVOR will be decmsnd at present site and recmsnd at new site lctd at lat 33-47-01, long. 118-03-16, on Los Alamitos NAS. Relctd fac will oper on same freq with same code and voice ident, but class will be VORW. (3-16)
LONG BEACH ARPT: Tfc ctl twr will be relctd in temp structure on SE corner of roof of Admin. Bldg. During new twr const twr will not be able to control tfc on areas of ramp, taxiways, rnwys and fld NW of temp twr, due to non-visibility. (3-4)
LOS ANGELES-RADIO: VAR visual courses not usable - moderate scalloping N sector.
LOS ANGELES INTERNATIONAL ARPT: Captive balloon will be flown intermittently from ground level to 1500', 4500' from apch end Rnwy 11. FIDO testing at irregular intervals. Due to non-visibility twr unable to ctl tfc on first 300' and last 600' of Rnwy 34 and last 1000' of Rnwy 29. Equip. on and adj to const areas.
MERCED-CASTLE AFB-RADIO: USAF LF rng receives interference from Stockton rng.
NEEDLES-RADIO: VOR 40 mi coverage from 5° - 15° and 190° - 205° at 8000' MSL, and 50° radial at 10,000' MSL. (4-24)
OAKLAND: Tfc operg between E and W shores San Francisco Bay continues to increase. Pilots proposing transbay flgt should ascertain that VFR weather exists within entire areas of both San Francisco and Oakland Control Zones or should obtain air tfc control clearance for flgt within a control zone when weather less than VFR. Ceiling and visibility mid bay is frequently less than over land at the two terminals. Precaution is urged so as to avoid hazardous tfc situation within this congested area. Tfc operg in VFR weather should avoid flying in vcnty of Alameda NAS. Extensive tfc including jet type acft operate in tfc pat from surface to 2000' within a radius of 2 miles of the stn. Precaution urged to avoid hazardous tfc conditions in this area. (1-14) Mar 13, Transocean inaugurated experimental tests new type anti-collision lgtg sys. Hi-intensity white Strobe lgts mounted top and bottom aft sections DC-4 acft. Opern lgts convey impression pulses lgt moving aft to forward, 30 cycles minute. Evaluation tests 30 days Pacific Ocean Area and possibly continental U. S. (3-15)

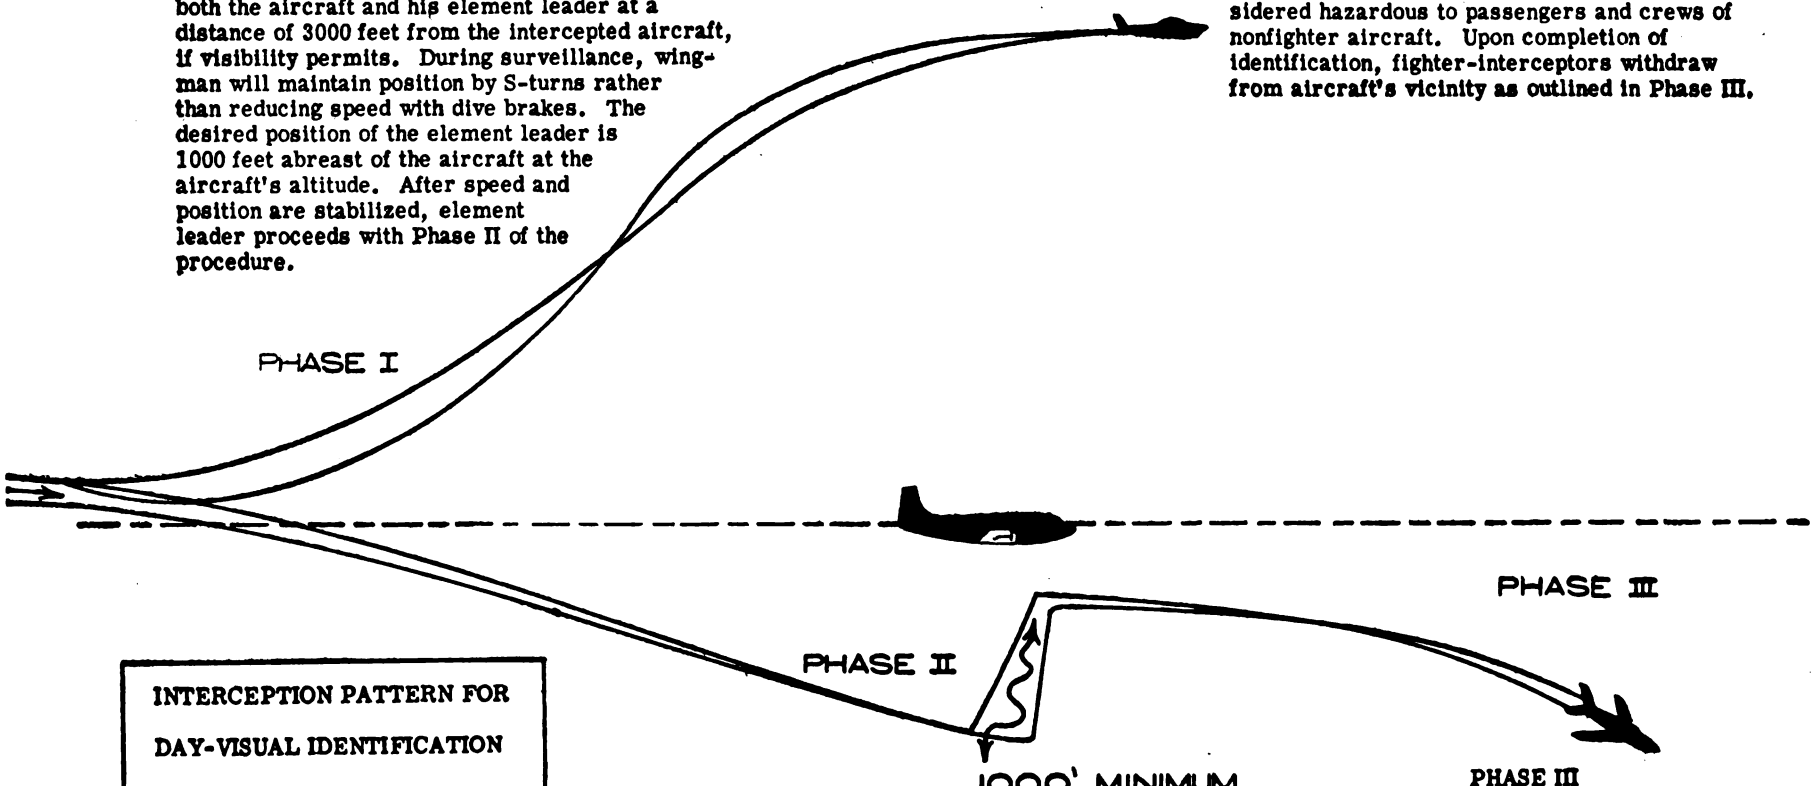
PHASE I

Intercepting aircraft approach intercepted aircraft from astern. Element leader reduces throttle and extends dive brakes. Wingman continues to the opposite side of the intercepted aircraft from the leader and climbs to 4000 feet above target aircraft altitude for the purpose of maintaining surveillance, using economical power setting. Should weather ceiling not permit surveillance from this position, wingman will assume a position on either side of aircraft which will permit observation of both the aircraft and his element leader at a distance of 3000 feet from the intercepted aircraft, if visibility permits. During surveillance, wingman will maintain position by S-turns rather than reducing speed with dive brakes. The desired position of the element leader is 1000 feet abreast of the aircraft at the aircraft's altitude. After speed and position are stabilized, element leader proceeds with Phase II of the procedure.

PHASE II

Wingman continues surveillance. Element leader begins gentle closure on aircraft at same level until no closer than absolutely necessary to obtain information needed. As he gives identification information to director, wingman copies information for mission report. Element leader uses every precaution to avoid startling intercepted aircrew or passengers, keeping constantly in mind that maneuvers considered normal to a fighter aircraft may be considered hazardous to passengers and crews of nonfighter aircraft. Upon completion of identification, fighter-interceptors withdraw from aircraft's vicinity as outlined in Phase III.



INTERCEPTION PATTERN FOR DAY-VISUAL IDENTIFICATION OF AIRCRAFT

August 25, 1953

PHASE III

Element leader breaks gently away from aircraft in shallow dive to pick up speed. Wingman stays well clear of intercepted aircraft and joins leader.

VOL. 9, NO. 2 .....APRIL 6, 1954

The AIRMAN'S GUIDE is issued every two weeks. This issue includes all data on record as of 0001 E.S.T. on the above date. For later information consult Teletype NOTAMS.

U. S. DEPARTMENT OF COMMERCE
CIVIL AERONAUTICS ADMINISTRATION
OFFICE OF AVIATION INFORMATION

✓ Indicates New or Revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Information, Attention, W-52, CAA, Washington 25, D. C.)

Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

VHF INSACS-TO-PRIVATE AIRCRAFT CHANNELS: The national VHF channel for transmission from INSACS-to-private aircraft, 122.2 mc was partially implemented beginning August 1, 1951. (The companion aircraft-to-INSACS frequency is 122.1 mc). Eventually all INSACS will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACS which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call.

When an INSACS is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACS have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° of azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries

---

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations, outer compass locators and fan markers).

Omniranges and outer compass locators where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification; e. g. Long Beach omni (voice) .-.. --. -... (LGB in Code).

At fan markers, the present tone identification (one dash, two dashes, etc.) is alternated with voice identification (e. g., "New Rochelle Fan"). Since these facilities are not listed in the ANRA pages, a list of fan markers where voice identification has been added follows:

Avon Lake, Ohio; Morgan Hill, Calif.; Smyrna, Ga.

NEW AIR TRAFFIC CLEARANCE PHRASEOLOGY ADOPTED: The phrase "VIA FLIGHT PLANNED ROUTE" has been adopted for use in air traffic clearances and may be used to replace the detailed description of any portion of the route of flight that is identical to the route filed by the pilot. IFR flight plans filed by pilots must contain the complete route of flight and must be relayed to air traffic control unchanged in order for this phraseology to be successfully used.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occurring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

✓ INTERCEPTION PATTERN FOR DAY-VISUAL IDENTIFICATION OF AIRCRAFT: The Air Defense Command advises that the "Interception Pattern for Day-Visual Identification of Aircraft", as published in the Flight Information Manual (Volume 7, Part 1, May 1953) page 101, has been modified to eliminate the initial pass ahead of the intercepted aircraft. The new procedure is graphically illustrated on page 88 of Airguide, Vol. 9, No. 1 (March 23, 1954).

Attention is directed to the following excerpts from the text accompanying the new pattern:

"Fighter-interceptor pilots are ordered to make every effort to prevent startling the intercepted aircraft air crews or passengers.

Ordered intercepts are essential to the defense of the country and will continue as required. Close adherence to Part 620 of the Regulations of the Administrator by all pilots will minimize the necessity for intercepts. Deviations result in unknown or suspicious tracks on air defense radars and intercepts must be ordered for identification.

Pilots being intercepted must hold a steady course and altitude. The intercept pattern has been developed and interceptor pilots well trained in its use to identify aircraft without creating additional hazard. Taking evasive action precludes precise following of the intercept pattern and creates a collision hazard. Also, pilots are urged not to shine Aldis lamps or other lights into the interceptor cockpit at night, blinding the pilot and creating a hazard.

The Air Defense Command will investigate all reports of apparent flagrant disregard for the safety of intercepted aircraft on the part of interceptor pilots and take appropriate disciplinary action."

✓ DANGER AREA DESIGNATIONS: The following Danger Area Amendment shall be effective as dated unless otherwise advised:

AMENDMENT NO. 75 TO PART 608 - DANGER AREAS
(April 27, 1954)

In Section 608.29, the Camp Edwards, Mass., areas, published on April 21, 1949, in 14 F. R. 1949, republished on July 16, 1949, in 14 F. R. 4292, and amended on September 22, 1951 in 16 F. R. 9680, are redesignated as one area (D-14), and revised to read as follows: Location: CAMP EDWARDS (Mass.) (D-14) (Boston Chart); Description: That area within a 3-mile radius of a point at lat. 41-43-30, long. 70-32-30, excluding that portion southeast of a line between points at lat. 41-40-54, long. 70-32-52 and lat. 41-44-17, long. 70-29-11; Altitudes: Unlimited; Time: Continuous; Using Agency: Department of Army, Camp Edwards, Mass.

The printing of this publication has been approved by the Director of the Bureau of Budget, April 8, 1953

✓ VOR RECEIVER CHECK SIGNALS: Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operation of the airborne system. These provisions consist of three different methods: (a) a radiated test signal consisting of a single radial; (b) certified check points on the airport surface; or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. The resultant indication should be either 0° or 180° (dependent upon the setting of the "To-From" indicator) with the omnibearing selector set at 0° and the flight path deviation indicator (FPDI) centered. Should the VOR receiver be of the automatic indicating type, the indication should be either 0° or 180° dependent upon the particular type of sensing designed into the receiver. Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of ± 4° be indicated through use of the ground check or ± 6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. Caution, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of April 2, 1954, check points or facilities have been established at the following airports (listed under city name):

STANDARD INSTRUMENT APPROACH PROCEDURES: Effective with this issue, the Airman's Guide resumes regular bi-weekly publication of Standard Instrument Approach Procedures. However, they will not be carried in future issues of the Flight Information Manual. In consequence, the procedures will appear in the Guide not as supplementary data to the Manual, but rather as Notam data, thus providing supplementary and/or corroborative information to the AL charts issued by the Coast and Geodetic Survey, as well as to those charts issued by certain private publishers. To provide sufficient advance notice to charting agencies, pilots and other users, the CAA normally formulates or revises instrument approach procedures at least 30 days before their effective dates. In special cases where, because of safety factors, it is not feasible to follow this procedure, a Teletype Notam will be issued for this purpose. All standard instrument approach procedures received in the Office of Aviation Information (W-52) up to the day before the Guide goes to press will appear in that bi-weekly issue of the Guide. Thus the procedures should appear in the Airman's Guide from one to three weeks prior to the effective date, except for those procedures issued by Teletype, which will be carried in the nextGuide subsequent to their date of issuance. All procedures issued since the Guide dated October 20, 1953, (Vol. 8, No. 16) are carried in today's Guide. Please consult the end of each listing for those procedures carried out of alphabetical order.

WARNING AREAS: PLACENTIA BAY, NEWFOUNDLAND WARNING AREAS "E" AND "F": The following area has been established: Description: Beginning at lat. 46-20-00, long. 54-23-43; thence South to lat. 45-40-00, long. 54-23-43; thence West to lat. 45-40-00, long. 55-07-00; thence North to lat. 46-20-00, long. 55-07-00; thence East to point of beginning; Altitude: Unlimited; Time of Use: Continuous Monday through Saturday; Activities: Air-to-air and surface firing; Using Agency: Naval Station, Argentia, Newfoundland. The operation is now in effect and will continue indefinitely.

MINIMUM EN ROUTE IFR ALTITUDES: Effective April 6, 1954, minimum en route IFR altitudes are amended as follows:

FLIGHT ADVISORY AREA BOUNDARY AMENDMENTS: Effective immediately the flight advisory area boundaries of the San Antonio, New Orleans and Fort Worth ARTC Centers are amended as follows: "Starting at 102 degrees West and the Rio Grande River direct 31-00N, 100-15W, direct 31-00N, 99-45W, direct Santa Anna, Texas direct 31-17N, 97-29W, then via an arc 25 miles south of Waco, Texas LF range to 31-27N, 96-51W, direct 31-34N, 94-36W, direct 31-29N, 94-27W, direct 31-30N, 93-46W, direct 30-10N, 93-34W, direct 29-54N, 93-33W, direct 28-41N, 93-33W, direct 28-15N, 92-40W, thence from 31-30N, 93-46W, direct 31-40N, 93-10W.

CIVIL AIRWAY, CONTROL AREA, CONTROL AREA EXTENSION, CONTROL ZONE AND REPORTING POINT AMENDMENTS: Effective April 27, 1954, civil airways, control areas, control area extensions, control zones and reporting points are amended in whole or in part as follows:

CIVIL AIRWAYS: (1) Amber Civil Airway No. 6 (Jacksonveille, Fla., to United States Canadian Border) is amended by changing the last portion to read: "From the intersection of the east course of the Cleveland, Ohio radio range and the northeast course of the Akron, Ohio radio range via the Perry, Ohio non-directional radio beacon to the intersection of the southwest course of the Clear Creek, Ontario, Canada, radio range and the United States-Canadian Border."

(2) Red Civil Airway No. 94 (Providence, R. I. to Hyannis, Mass.) is amended to read: "From the Providence, R. I. radio range station via the Otis AFB, Falmouth, Mass. non-directional radio beacon located at lat. 41-36-15, long. 70-32-31, to the Hyannis, Mass. non-directional radio beacon, excluding the portion which lies more than 4 miles north of the centerline between this Otis AFB non-directional radio beacon and the Hyannis non-directional radio beacon."

(3) Blue Civil Airway No. 15 is amended by changing the caption to read: "(Huntington, W. Va. to Akron, Ohio)" and is now amended to read: "From the Huntington, W. Va. non-directional radio beacon via the Columbus, Ohio radio range station to the Akron, Ohio radio range station."

(4) Blue Civil Airway No. 81 (Charleston, W. Va. to U. S.-Canadian Border) is amended by changing the first portion to read: "From the Charleston, W. Va. radio range station via the Zanesville, Ohio non-directional radio beacon; Akron, Ohio radio range station to the intersection of the northeast course of the Akron, Ohio radio range and the east course of the Cleveland, Ohio radio range."....

(5) VOR Civil Airway No. 2 (Seattle, Wash. to Boston, Mass.) is amended by deleting that portion which reads: "Alexandria omnirng 137° true radial" and substituting in lieu thereof: "Alexandria omnirng 136° true radial."

(6) VOR Civil Airway No. 4 (Seattle, Wash. to Washington, D. C.) is amended between the St. Louis, Mo. omnirng stn and the Evansville, Ind. omnirng station to read: "St. Louis, Mo. omnirng station, including a north and a south alternate; Centralia, Ill. omnirng station, including a north alternate; Evansville, Ind. omnirng station, including a south alternate;"

(7) VOR Civil Airway No. 65 (Bonner Springs, Kans. to St. Joseph, Mo.) is added to read: "From the point of intersection of the Kansas City, Mo. omnirng 231° true and the St. Joseph omnirng 178° true radials to the St. Joseph, Mo. omnirng station."

(8) VOR Civil Airway No. 141 (Nantucket, Mass. to Concord, N. H.) is amended to read: "From the Nantucket, Mass. omnirng station via the intersection of the Nantucket omnirng 331° true and the Boston omnirng 137° true radials; Boston, Mass. omnirng station to the Concord, N. H. omnirng station."

(9) VOR Civil Airway No. 157 (Lawrenceville, Va. to Richmond, Va.) is amended to read: "From the Lawrenceville, Va. omnirng station to the Richmond, Va. LF radio range station, excluding the portion which overlaps the Camp Pickett danger area (D-44)."

CONTROL AREAS: (1) VOR Civil Airway No. 65 (Bonner Springs, Kans. to St. Joseph, Mo.) is added to read: "All of VOR civil airway No. 65."

(2) VOR Civil Airway No. 141 (Nantucket, Mass. to Concord, N. H.) is amended to read:

"All of VOR Civil Airway No. 141."

CONTROL AREA EXTENSIONS: (Pasco, Wash.) is added to read: "That airspace beginning at a point at lat. 46-13-03, long. 119-03-45, within 5 miles either side of lines drawn 179° true and 269° true extending from that point to their intersection with the northeast boundary of Blue civil airway No. 32; that airspace bounded by lines 5 miles south of and 10 miles north of and parallel to a line drawn 89° true from the point of beginning extending to the northwest boundary of VOR civil airway No. 103 on the south to long. 118-43-30 on the north, bounded on the west by long. 119-03-45, and including the airspace within 5 miles either side of the northwest course of the Walla Walla, Wash. radio range from the radio range station northwestward to long. 118-43-30."

(2) CONTROL ZONES: (1) (El Toro, Calif.) is amended to read: "Within a 5 mile radius of the El Toro, Calif. Marine Corps Air Station, within a 3 mile radius of Orange County Airport, Santa Ana, Calif., and within 5 miles either side of the south and north courses of the El Toro radio range extending from Amber civil airway No. 1 on the south to Amber civil airway No. 2 and Green civil airway No. 5 on the north."

(2) (Falmouth, Mass.) is amended to read: "Within a 5 mile radius of Otis Air Force Base and within 2 miles either side of a line bearing 39° true extending from the Otis AFB to a point 10 miles northeast of the Air Force Base, excluding the portion which overlaps Camp Edwards danger area (D-14)."

REPORTING POINT: Green civil airway No. 4 (Los Angeles, Calif. to Philadelphia, Pa.) is amended by deleting the following reporting point: "the intersection of the east course of the Columbus, Ohio radio range and a track 360° magnetic from the Zanesville, Ohio non-directional radio beacon;" and by adding the following reporting point in lieu thereof: "the intersection of the east course of the Columbus, Ohio radio range and the southwest course of the Akron, Ohio, radio range;" (Adamsville intersection)

✓ ADIZ DESIGNATIONS - REGULATIONS OF THE ADMINISTRATOR, PART 620 (SECURITY CONTROL OF AIR TRAFFIC) - REVISED EFFECTIVE MAY 1, 1954 - (AMENDMENT NO. 2): This amendment consists principally of changes in ADIZ designations. The Seattle, San Francisco, and Los Angeles ADIZ's have been enlarged somewhat. Note there is no longer any gap between the Seattle and San Francisco ADIZ. The southern portion of the Minneapolis ADIZ has been deleted. (See Chart page 56).

The most significant change, however, is the deletion of the Canadian (International) Boundary ADIZ south of the 46th parallel between Sault Ste. Marie, Michigan, and the western boundary of Maine. As a result of this deletion, Part 620 has been liberalized to permit aircraft to operate from Canada into the Bangor and Traverse City ADIZ's in this area without being subject to security rules if the aircraft is operated less than 4000 feet above the terrain.

The deletion of this portion of the Canadian (International) Boundary ADIZ will probably be most welcome to owners of small aircraft not equipped with two-way radio. Pilots of aircraft equipped with two-way radio, however, are urged to observe the following recommended ADIZ practices in this area:

(1) Guard an appropriate CAA frequency at all times and comply with ADIZ requirements even though operating at less than 4000 feet above the immediate terrain.
(2) Adhere to your estimates and route of flight as closely as possible.
(3) If at all possible, file your flight plan in person or by telephone.

✓ ON-REQUEST REPORTING POINTS: Effective immediately the following on-request reporting points are established or cancelled, as indicated:

CANCELLATION:

(1) ETNA INTERSECTION - intersection Columbus, Ohio LFR E ers with Arkon LFR SW course.

ESTABLISHMENTS:

(2) BRADLEY INTERSECTION - intersection of the Poughkeepsie VOR 91° magnetic radial with the Windsor Locks ILS SW course.

(3) GREAT BEND INTERSECTION - intersection 049° magnetic radial Dodge City, Kans. VOR and 286° magnetic radial Hutchinson, Kansas VOR.

(4) KIRKWOOD INTERSECTION (LF) - intersection of the south course of the St. Louis LF radio range and 280° magnetic bearing from the Scott Air Force Base LF radio range.

(5) KIRKWOOD INTERSECTION (LF/OMNI) - intersection of the 165° magnetic radial of the St. Louis omnirange and a 280° mangetic bearing from the Scott Air Force Base LF radio range.

(6) PERCH INTERSECTION (LF/OMNI) - intersection of the SE course of the Detroit LF radio range and the 060° magnetic radial of the Waterville omnirange.

(7) PELEE INTERSECTION (LF/OMNI) - intersection of the SE course of the Windsor LF radio range and the 060° magnetic radial of the Waterville omnirange.

(8) PINS INTERSECTION (OMNI) - intersection of the 099° magnetic radial of the Detroit omnirange and the 015° magnetic radial of the Cleveland omnirnage.

✓ AIRMAN'S GUIDE CORRECTIONS: Correct Airman's Guide, Volume 9, #1, dated March 23, 1954, as follows:

(1) Page 75. Under Civil Airways. Change VOR 4 in item 5, line 5, to read: "Goodland 304° true radial" instead of 305; VOR 8, item 8, line 7, to read: "Imperial 237° true radial" instead of 238; VOR 140, item 15, line 6, to read: "Colts Neck 242° true radial" instead of 246.

(2) Page 76. Change first paragraph to read: "Colorado Springs, Colo. control area extension revoked"; change second paragraph, Colorado Springs, Colo. control zone to read: "within a 5 mile radius of Peterson Municipal arpt and within 2 miles either side of a line bearing 180° true extending from the airport to a point 15 miles south of airport".

✓ NON-STANDARD HOLDING PATTERNS: Effective immediately the following non-standard holding patterns are established:

(1) RED FORK INTERSECTION (VHF) - direction of holding - SW on the Tulsa 198° radial; direction of turn - LEFT; time - 2 minutes. Minimum altitude: 3400'.

(2) PERCH INTERSECTION - direction of holding - SE; direction of turn - LEFT; time - 2 minutes. Minimum altitude: 2300'.

NOTE: • Because of space limitation such items are cited only once. The erection or removal of radio station towers, water tanks, oil derricks and permanent airport obstructions are examples of material cited only once.

ALABAMA: ANNISTON-RADIO: VOR cmsnd as full time nav fac, all courses aligned within tolerance. Courses 360° clockwise to 070° not usable because of course bends and roughness. Min reception alt at 50 mi as follows: 300° clockwise to 070°, 4000'; 070° clockwise to 100°, 3500'; 100° clockwise to 180°, 3000'; 180° clockwise to 220°,2000'; 220° clockwise to 300°, 2500' MSL.
BIRMINGHAM-RADIO: All arwy courses have mild to moderate roughness. (10-29)
BIRMINGHAM-ARPT-TOWER: Effect. April 19, apch ctl will utilize radar procedures to effect control and separation of arriving tfc destined for Birmingham Municipal Arpt. These procedures are described generally on page 63 Part 1 of Flgt Info Manual. Standard non-radar separation will be provided to any acft if requested by pilot on first rdo contact with apch control. (3-19) FLD: 150' temp twr erected adj to fld at lat 33-30-12, long. 86-45-12.
EVERGREEN-MIDDLETON FLD: Caution-vehicles and farm equip intermittently crossing rnwys and using taxi strips.
HUNTSVILLE-RADIO: VOR radials clockwise 0-160° unusable-excessive course roughness. March 23, VOR resumed opern. (3-29)
HUNTSVILLE ARPT: NE/SW Rnwy lgts inop. (2-6)
**LANETT-VALLEY ARPT: 168' (904' MSL) lgtd twr erected 3.5 mi W (255°T) at lat 32-50-49, long. 85-14-04. (3-25)
MOBILE-RADIO: VOR flgt-checked on arwy radials only.
MONTGOMERY-DANNELLY FLD: Rnwy 3-21 open for lgt plane tfc only, during daylgt hrs from intsxn with E/W Taxiway to S/W end. Rnwy 15-33 open for lgt plane tfc only, during daylgt hrs from intsxn with Rnwy 3-21 to N/W end. Caution - area under const. (3-16)
**PHENIX CITY ARPT: 318' (913' MSL) lgtd rdo twr erected 1.5 mi NW (330°T) at lat 32-31-43, long. 85-01-52. (3-25)
ARIZONA: CHANDLER-WILLIAMS AFB-RADIO: USAF VHF/DF steers unreliable on inbound headings 300°-080° below 7000' beyond 40 mi from stn. (12-7)
DOUGLAS-BISBEE-DOUGLAS INTERNATIONAL ARPT: Pilots are cautioned to use maximum length of rnwys for landings and take-offs - due to obstructed view of ends. Take-offs from intersections of rnwys and taxiways prohibited.
GILA BEND-RADIO: VOR arwy radials flgt-checked at minimum instrument alt. Slow bends and scalloping starting at approx 30 to 35 mi on 247° radial and at 35 to 40 mi on 106° radial.
KINGMAN ARPT: Caution-intermittent target plane testing in vcnty. Rdo controlled acft operating in area NW of fld.
PHOENIX-LUKE AFB-RADIO: USAF VHF/DF unreliable inbound headings 340-300° counterclockwise below 8000' and 100-60° counterclockwise below 12,000'. (1-21)
PRESCOTT-RADIO: VOR radials 185 to 225° usable dist 40 mi at 10,000'MSL; 135 to 145° and 165 to 185° usable dist 45 mi at 10,000' MSL.
TUCSON-RADIO: Only VOR arwy radials flgt-checked. Coverage restricted at min terrain clearance alt by nearby mountainous terrain N, E and S. (8-28)
★TUCSON-DAVIS-MONTHAN AFB-RADIO: USAF UHF/DF unreliable 170-270° clockwise below 14,500' at 40 mi; unreliable at min en route alts all quads. (1-28) USAF VHF/DF lmtd in rng to 30 mi in quads containing inbound headings of 150-210° and 245-275°; rng 50 mi other quads; steers unreliable below 13,000' all quads. (12-23) USAF UHF/DF inop 0800-0900 each Wed. (2-3) VHF/DF no longer opers 138.42 mc. (3-31)
YUMA-COUNTY ARPT: B-45 type acft towing 5000' of cable and tow target in vcnty. All acft refrain from flying in close proximity to B-45 type acft in Yuma area. (2-3) Men and hvy equip. working at apch end Rnwys 3 and 35, during daylgt hrs - extreme caution. (1-26) Apch lgt sys (low intensity) and boundary lgts have been removed from Rnwy 35 and replaced with flare pots, or flashing red lgts to mark a 15 inch drop-off at the apch end Rnwy 35 - extreme caution. (2-5)
ARKANSAS: **FLIPPIN ARPT 18, TUL-BNA: 250' (1357' MSL) rdo twr erected 5 mi N (348°T) at lat 36-21-39; long. 92-36-04. (3-24)
HARRISON ARPT: New NW/SE Rnwy under const. Fld clsd for ngt operns. (3-10)
LITTLE ROCK-ADAMS FLD: Rnwy 4-22 clsd - resurfacing. (3-22)
TEXARKANA-RADIO: VOR 143° radial to Rnwy 13 beyond tolerance due to roughness and bends. (6-10)
WALNUT RIDGE-RADIO: VOR radials 290 - 320° and 120-150° have severe bends and course roughness.
CALIFORNIA: ARCATA ARPT: Experimental testing of rotating lgts in inner apch zone of Rnwy 31 at infrequent times. Rotating lgts at 2100' and 1000' S of threshold of rnwy with six high intensity lgts rotating at 6 or 12 rpm.

CALIFORNIA: BAKERSFIELD-RADIO: VOR has slight to moderate scalloping in SE quad 80° to 123°. Radials 0, 90, 100, 130, 140, 150, 220, 270, 300 and 330° flgt-checked.
BLUE CANYON ARPT, 13, SFO-SLC: Closed - snow.
BRAWLEY ARPT: Equip. on Rnwy 9-27. (11-3)
CORNING ARPT: Strip unsafe - mud. (2-3)
CRESCENT CITY-RADIO: VOR arwy radials flgt-checked. Courses from 90 thru 330° usable dist 25 mi. From 330° thru 350° usable dist 60 mi at min instr alts. Courses 350° to 90° usable dist 30 mi at 7000' MSL; 50 mi at 8000' MSL. (6-22)
DAGGETT-RADIO: VOR 113.2 mc. Only arwy radials flgt-checked. (12-3)
FT. JONES-RADIO: VOR has lgt course roughness all quads. Only arwy radials flgt-checked.
FORTUNA-RADIO: VOR has lgt to moderate scalloping beyond 30 mi. Only arwy radials flgt-checked. (10-6)
FRESNO AIR TERMINAL-TOWER: Mar 30, ILS resumed normal opern.
GASQUET ARPT: N side of strip clsd - const.
KING CITY ARPT: Rnwy lgts inoperative. (3-10)
LONG PEACH-RADIO: Feb 8, DME and VOR voice ident feature only shut down. About April 15, BVOR will be decmsnd at present site and recmsnd at new site lctd at lat 33-47-01, long. 118-03-16, on Los Alamitos NAS. Relctd will oper on same freq with same code and voice ident, but class will be VORW. (3-16)
LONG BEACH ARPT: Tfc ctl twr will be relctd in temp structure on SE corner of roof of Admin. Bldg. Durg new twr const twr will not be able to control tfc on areas of ramp, taxiways, rnwys and fld NW of temp twr, due to non-visibility. (3-4)
LOS ANGELES-RADIO: VAR visual courses not usable - moderate scalloping N sector.
LOS ANGELES INTERNATIONAL ARPT: Captive balloon will be flown intermittently from ground level to 1500'. 4500' from apch end Rnwy 11. FIDO testing at irregular intervals. Due to non-visibility twr unable to ctl tfc on first 300' and last 600' of Rnwy 34 and last 1000' of Rnwy 29. Equip. on and adj to const areas.
MERCED-CASTLE AFB-RADIO: USAF LF rng receives interference from Stockton rng.
NEEDLES-RADIO: VOR 40 mi coverage from 5° - 15° and 190° - 205° at 8000' MSL, and 50° radial at 10,000' MSL.
OAKLAND: Tfc operg between E and W shores San Francisco Bay continues to increase. Pilots proposing transbay flgt should ascertain that VFR waether exists within entire areas of both San Francisco and Oakland Control Zones or should obtain air tfc control clearance for flgt within a control zone when weather less than VFR. Ceiling and visibility mid bay is frequently less than over land at the two terminals. Precaution is urges so as to avoid hazardous tfc situation within this congested area. Tfc operg in VFR weather should avoid flying in vcnty of Alameda NAS. Extensive tfc including jet type acft operate in tfc pat from surface to 2000' within a radius of 2 miles of the stn. Precaution urged to avoid hazardous tfc conditions in this area. (1-14) March 13, Transocean inaugurated experimental tests new type anti-collision lgtg sys. Hi-intensity white Strobe lgts mounted top and bottom aft sections DC-4 acft. Opern lgts convey impression pulses lgt moving aft to forward, 30 cycles/minute. Evaluation tests 30 days Pacific Ocean Area and possibly continental U.S. (3-15)
OAKLAND-RADIO: VOR maximum usable dist 40 mi N thru E at min instr alt. (1-14)
OAKLAND ARPT: 10' dike on end Rnwy 27 - hazard to jet lndgs. (3-26)
★OXNARD AFB-RADIO: USAF H fac class changed from MHW to MH. (3-31)
PALMDALE-RADIO: VOR 40 mi coverage from 120 to 150° at 10,000' MSL and 40 mi from 150 to 180° at 9,000' MSL. (6-6)
**PALM SPRINGS ARPT: Rnwy lgts oper on req from May 1 to Oct 1 and automatically from Oct 1 to May 1. (3-26)
PASADENA-ROSEMEAD ARPT: Work in progress W 600' NE/SW rnwy. (2-20)
PORTERVILLE ARPT: Electric Ear controlling lights, inoperative.
SACRAMENTO-RADIO: VOR usable dist 45 mi at 3000' MSL from 245° to 260°. (6-11)
SACRAMENTO-McCLELLAN AFB-RADIO: USAF H fac reliable up to 15 mi. (6-11)
SALINAS-RADIO: VOR coverage from 20° to 95° and 135° to 295°, 40 mi at min instr alt.
SAN DIEGO-RADIO: VOR has lgt to moderate scalloping in all quads. Arwy radials and radials 0, 80, 100, 140, 150, 270, 300, 310, 320° flgt-checked.
SAN FRANCISCO: See Oakland Control Zone Notam.
SAN FRANCISCO ARPT: Taxiway 1 paralleling Rnwys 10R and 1L clsd. Equip. on fld. Acct unequal settlement a hump of 5" rise in 75' to peak then pavement surface sloping 5" in 75' to level pavement grade has developed across Rnwy 10L-28R, 3000' from W end of Rnwy. (2-3)
CALIFORNIA: SAN RAFAEL-HAMILTON AFB-RADIO: USAF VHF/DF unreliable 340°-135° clockwise below 11,000'. (2-26)
SANTA ANA-EL TORO MCAS-RADIO: Navy LF rng, ident NZJ, freq 407 kc, unreliable. Multiples all courses. Usable for homing only. (1-29)
SANTA ANA-ORANGE COUNTY ARPT: Caution southeastern half of Rnwy 3-21 torn up for renovation. Aerial motion picture flying in vcnty will be conducted intermittently Mar 8 thru Apr 23. Daylgt VFR 20 mi radius unpopulated areas within 2000' of N edge of Arwys When operns conducted on arpt, fld will be closed to other acft. Extreme caution. (3-8)
STOCKTON ARPT: All rnwys and taxiways open except Rnwy 11-29, avail. with caution daylgt hrs. Rnwy 16-34 lgtd ngts. (3-26)
UKIAH-RADIO: VOR usable dist 40 mi from 20° thru 40° at min instr alts. (6-23)
VICTORVILLE-GEORGE AFB-RADIO: USAF VHF/DF call changed to Homer; steers unreliable 235°-325° and 360°-045° clockwise below 15,000'. UHF/DF steers unreliable 230°-060° clockwise below 15,000'. (3-2)
COLORADO: COLORADO SPRINGS-RADIO: About April 13, LF rng, associated voice feature and Z mrkr will be discontd. Concurrently, ILS LOM will be operated as H fac, with ident interrupted during voice transmissions. (3-23)
COLORADO SPRINGS-PETERSON FLD: Due to non-visibility twr unable to ctl tfc apch end Rnwy 35, approx 5000' SW end Rnwy 3-21, area Rnwy 12-30 extending from mid fld taxi strip to approx 1000' NW, mid fld taxi strip extending from intsxn Rnwy 12-30 to a point approx half way SW on taxi strip, ramp area in front of new terminal bldg. (3-23)
DENVER-STAPLETON FLD-TOWER: Interference from Las Vegas, N. Mex., LF rng on 359 kc causes serious reception problem when using Denver ILS LOM. Use caution.
FLD: Rnwy 8L-26R clsd to operns heavier than DC-3 acft xcpt when absolutely necessary for taxiing W of Rnwy 3-21. Heavy air tfc N and E due to extensive instrument trng.
GRANBY ARPT: Closed. (9-23)
★GRAND JUNCTION-RADIO: DME at VOR site operg on test basis. (3-24)

GROUND CONTROLLED APPROACH SYSTEM PROCEDURES

When a GCA instrument approach is conducted at the below named airport(s), it shall be in accordance with the following instrument approach procedure(s), unless an approach is conducted in accordance with a different procedure authorized by the Administrator for such airport(s). Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the ground controller. From initial contact with GCA to final authorized landing minimums, the instructions of the GCA controller are mandatory except when (A) visual reference with the ground is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach.

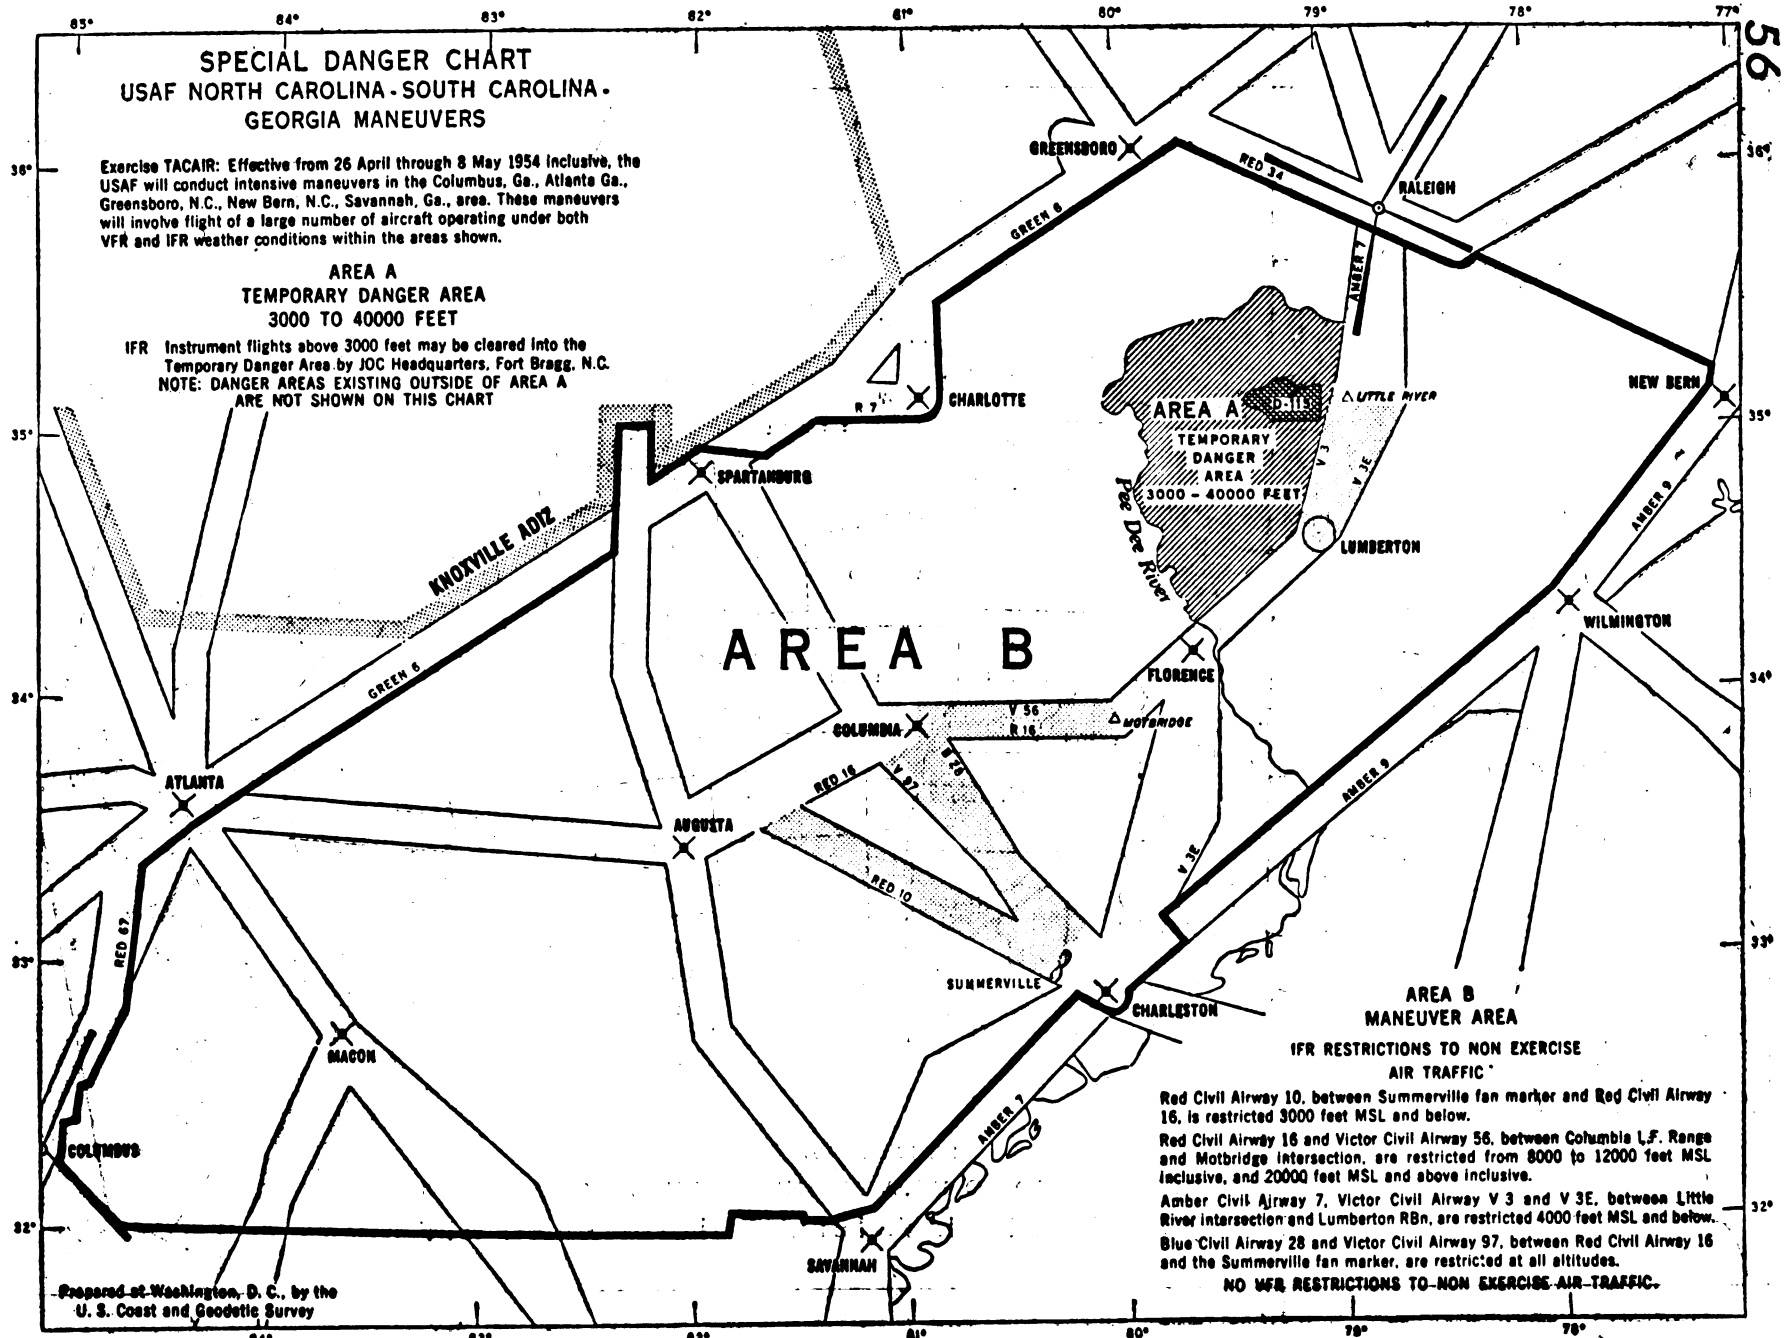
SPECIAL DANGER CHART
USAF NORTH CAROLINA - SOUTH CAROLINA - GEORGIA MANEUVERS

Exercise TACAIR: Effective from 26 April through 8 May 1954 inclusive, the USAF will conduct intensive maneuvers in the Columbus, Ga., Atlanta Ga., Greensboro, N.C., New Bern, N.C., Savannah, Ga., area. These maneuvers will involve flight of a large number of aircraft operating under both VFR and IFR weather conditions within the areas shown.

AREA A
TEMPORARY DANGER AREA
3000 TO 40000 FEET

IFR Instrument flights above 3000 feet may be cleared into the Temporary Danger Area by JOC Headquarters, Fort Bragg, N.C.
NOTE: DANGER AREAS EXISTING OUTSIDE OF AREA A ARE NOT SHOWN ON THIS CHART



AREA B
MANEUVER AREA

IFR RESTRICTIONS TO NON EXERCISE AIR TRAFFIC

Red Civil Airway 10, between Summerville fan marker and Red Civil Airway 16, is restricted 3000 feet MSL and below.

Red Civil Airway 16 and Victor Civil Airway 56, between Columbia L.F. Range and Motbridge intersection, are restricted from 8000 to 12000 feet MSL inclusive, and 20000 feet MSL and above inclusive.

Amber Civil Airway 7, Victor Civil Airway V 3 and V 3E, between Little River intersection and Lumberton RBn, are restricted 4000 feet MSL and below.

Blue Civil Airway 28 and Victor Civil Airway 97, between Red Civil Airway 16 and the Summerville fan marker, are restricted at all altitudes.

NO IFR RESTRICTIONS TO NON EXERCISE AIR TRAFFIC.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

AIR NAVIGATION RADIO AIDS

INSACS = Interstate Airway Communications Station/s (CAA)

VHF OMNI-RANGE: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSACS. (C) The station identification is monitored continuously by the communicator at the associated INSACS. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSACS. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category I are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored soley through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSACS, and located too distant from INSACS to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180", indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . . . Approach Control Tower, CAA (transmits on voice channel of associated ranges and ILS in addition to frequencies listed)
B. . . . . Scheduled Broadcast Station (broadcasts weather at 15 and 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . . Control Tower, CAA
CI. . . . . Control Tower, (City, County, Private, etc.)
D. . . . . Distantly controlled
DME. . . . Distance Measuring Equipment
FM. . . . . VHF fan marker (100 watts)
GCA. . . . Ground Controlled approach system
H. . . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . . Instrument Landing System (voice on localizer channel)
J. . . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . . . VHF fan marker, low powered (5 watts)
LMM. . . Compass locator station when installed at middle marker site
LOM. . . . Compass locator when installed at outer marker site
LVOR. . . Low power VOR (with standby equipment)
MH. . . . . Non-directional radio beacon (homing) power less than 50 watts
ML. . . . . Range (loop radiators), power less than 50 watts
MM. . . . VHF middle marker
MOR. . . . Low frequency omni-drectional range
MRA. . . . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . . . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . . . VHF outer marker
P. . . . . Point-to-Point radio
RA. . . . . Range (adcock, vertical radiators), power 150 watts or more
RL. . . . . Range (loop radiators), power 150 watts or more
S. . . . . Simultaneous range, homing and voice signals available. Inclusion suffix "W" indicates range and homing signals only
T. . . . . Teletype
TVOR. . . Low power VOR (no standby equipment) located on airport
TX. . . . . Principal teletype
V. . . . . Additional VHF voice feature on other than range frequency
VAR. . . . Visual-aural VHF range
VOR. . . . VHF omni-directional range (omni-range)
W. . . . . Without voice facilities on range frequency
Z. . . . . VHF station location marker at a range station

NOTES

1. Range courses are magnetic in-bearings
2. All CAA MH facilities operate continuously unless cited as follows: (on req)
3. All CAA ranges operate continuously. Those which are not manned continuously are cited in the remarks column with hours of operation in parentheses, e.g., (6-24)
4. VHF and LF/LMF ranges listed with the same identifier are controlled by the same INSACS. Due to space limitations the DTV and communication frequencies which are listed with the LF/LMF facility are not repeated with the VOR facility

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

RADAR AVAILABLE : How and Where

PAR = Precision Approach Radar. ASR = Airport Surveillance Radar. GCA = Ground Controlled Approach - Military Equivalent of Combined ASR and PAR Equipment. ARSR = Air Route Surveillance Radar.

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway The final approach flight path on a precisionscope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying. VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

RADAR ARRIVAL AND DEPARTURE CONTROL - Radar is utilized by certain radar equipped facilities to control the flight paths of arriving or departing IFR aircraft for the purpose of expediting the flow of traffic. Aircraft operating on IFR flight plans will be afforded a minimum of three miles horizontal separation unless standard non-radar vertical, lateral or longitudinal separation exists. This should not be confused with Ground Controlled Approach (GCA) which is an instrument approach aid.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.
Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.
Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.
Emergency: When a receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.
After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible
Civil Minimums at military installations established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums. Navy units are prepared to transmit on HF from 2,000 to 18,000 kc and receive any frequency from 1,500 to 9,050 kc to aid any plane in emergency.

RADAR FLIGHT ADVISORY SERVICE: This service to aircraft encountering severe weather condition may be obtained by requesting radar advisory through an appropriate ground station or direct ARTC communication. ARTC will determine if service can be provided and will request pilot to change to appropriate frequency for direct communication with radar. Radar station will be identified by "THIS IS AIR FORCE RADAR ADVISORY." All suggested vectors to circumnavigate storm areas will be of advisory nature and do not relieve pilot of responsibility for safety of aircraft. If advisory service cannot be furnished for any reason, the procedure word "UNABLE" will be used. This will terminate radar advisory service to the aircraft without further explanation. This service will be available in the following ARTC Flight Advisory Areas: Chicago, St. Louis, Minneapolis, Kansas City, Albuquerque San Antonio, Ft. Worth, and the Knoxville Air Defense Identification Zone.

CAA RADAR UNITS

NOTE: Unless noted in Remarks, all units guard the VHF frequencies transmitted plus 3023.5 kc and 122.5 mc. In addition to the frequencies listed, they transmit on: 118.1, 121.5, 126.18 mc.

ILS localizer identifier is preceded by International Morse Code "I" (two dots). Time interval between the "I" designator and the first letter of the assigned characteristic will be 0.6 second. *-Automatic voice identification. **-Distance from markers to approach end ILS runway. NOTE: The service area of compass locators is 15 miles.

NOTICES TO AIRMEN

SPECIAL NOTICES

✓ Indicates New or Revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Information, Attention, W-52, CAA, Washington 25, D. C.)

Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

VHF INSACS-TO-PRIVATE AIRCRAFT CHANNELS: The national VHF channel for transmission from INSACS-to-private aircraft, 122.2 mc was partially implemented beginning August 1, 1951. (The companion aircraft-to-INSACS frequency is 122.1 mc). Eventually all INSACS will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACS which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call.

When an INSACS is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACS have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° of azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

✓ AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations, outer compass locators and fan markers).

Omniranges and outer compass locators where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification; e. g. Long Beach omni (voice) .-.. --. -... (LGB in Code).

At fan markers, the present tone identification (one dash, two dashes, etc.) is alternated with voice identification (e. g., "New Rochelle Fan"). Since these facilities are not listed in the ANRA pages, a list of fan markers where voice identification has been added follows:

Avon Lake, Ohio; Morgan Hill, Calif.

NEW AIR TRAFFIC CLEARANCE PHRASEOLOGY ADOPTED: The phrase "VIA FLIGHT PLANNED ROUTE" has been adopted for use in air traffic clearances and may be used to replace the detailed description of any portion of the route of flight that is identical to the route filed by the pilot. IFR flight plans filed by pilots must contain the complete route of flight and must be relayed to air traffic control unchanged in order for this phraseology to be successfully used.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occurring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

INTERCEPTION PATTERN FOR DAY-VISUAL IDENTIFICATION OF AIRCRAFT: The Air Defense Command advises that the "Interception Pattern for Day-Visual Identification of Aircraft", as published in the Flight Information Manual (Volume 7, Part 1, May 1953) page 101, has been modified to eliminate the initial pass ahead of the intercepted aircraft. The new procedure is graphically illustrated on page 88 of Airguide, Vol. 9, No. 1 (March 23, 1954).

Attention is directed to the following excerpts from the text accompanying the new pattern:

"Fighter-interceptor pilots are ordered to make every effort to prevent startling the intercepted aircraft air crews or passengers.

Ordered intercepts are essential to the defense of the country and will continue as required. Close adherence to Part 620 of the Regulations of the Administrator by all pilots will minimize the necessity for intercepts. Deviations result in unknown or suspicious tracks on air defense radars and intercepts must be ordered for identification.

Pilots being intercepted must hold a steady course and altitude. The intercept pattern has been developed and interceptor pilots well trained in its use to identify aircraft without creating additional hazard. Taking evasive action precludes precise following of the intercept pattern and creates a collision hazard. Also, pilots are urged not to shine Aldis lamps or other lights into the interceptor cockpit at night, blinding the pilot and creating a hazard.

The Air Defense Command will investigate all reports of apparent flagrant disregard for the safety of intercepted aircraft on the part of interceptor pilots and take appropriate disciplinary action."

✓ AIRMAN'S GUIDE PRICE REDUCED: Effective immediately the annual subscription rate of the Airman's Guide is reduced to $2.75 domestic and $3.75 foreign. This price, as in the past, includes the 26 issues of the Guide plus the annual Flight Information Manual. This price reduction reflects changes made in the size of the Airman's Guide during the past several weeks. The contents of the Guide will continue, as at present, to consist of the following: Notams (including Special Notices) in every issue; radio facility data listing in every other issue; and the Directory of Airports will be carried once each quarter.

✓ EXPLANATION: CAA "LOW ALTITUDE CONTROL" SERVICE: The expression, "Low Altitude Control" applies to the air traffic control service available to aircraft operating on approved IFR flight plans at lower altitudes between specified terminals and is handled by CAA approach control towers.

✓ VOR RECEIVER CHECK SIGNALS: Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operation of the airborne system. These provisions consist of three different methods: (a) a radiated test signal consisting of a single radial; (b) certified check points on the airport surface; or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. The resultant indication should be either 0° or 180° (dependent upon the setting of the "To-From" indicator) with the omnibearing selector set at 0° and the flight path deviation indicator (FPDI) centered. Should the VOR receiver be of the automatic indicating type, the indication should be either 0° or 180° dependent upon the particular type of sensing designed into the receiver. Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of ± 4° be indicated through use of the ground check or ± 6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. Caution, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of April 16, 1954, check points or facilities have been established at the following airports (listed under city name):

✓ PILOTS CONTEMPLATING FOREIGN FLIGHTS: Pilots contemplating flying over or landing in any foreign country are urged to consult the current International Flight Information Manual published by U. S. Government Printing Office, or nearest CAA International District Office, and CAA International Notam Office to determine procedures required by those foreign countries intended to be traversed.

✓ CIVIL AIRWAY, CONTROL AREA EXTENSION, AND REPORTING POINT AMENDMENTS: Effective May 11, 1954, civil airways, control area extensions and reporting points are amended in whole or in part as follows:

CIVIL AIRWAYS: (1) Blue Civil Airway No. 4 is amended by changing caption to read: "(Boston, Mass. to U. S. Canadian Border)" and by deleting the first portion which reads: "From the Nantucket, Mass. VHF radio range station via the intersection of the NW course of the Nantucket, Mass. VHF radio range and the SE course of the Squantum, Mass. (Navy) radio range to the Squantum, Mass. (Navy) radio range station."

(2) VOR Civil Airway No. 3 (Key West, Fla. to Bangor, Maine) is amended by deleting the portion which reads: "Lawrenceville, Va. omnirange station; intersection of the Lawrenceville omnirange 035° true and the Flat Rock omnirange 171° true radials;" and substituting the following in lieu thereof: "Lawrenceville, Va. omnirange station; intersection of the Lawrenceville omnirange 035° true and the Flat Rock omnirange 171° true radials, excluding the portion which overlaps the Camp Pickett danger area (D-44);"

(3) VOR Civil Airway No. 136 (Pulaski, Va. to Danville, Va.), is amended by deleting the portion which reads: "Danville omnirange 297° true" and substituting in lieu thereof; "Danville omnirange 298° true."

CONTROL AREA EXTENSIONS: (1) (Nantucket, Mass.) is amended to read: "That airspace within tangent lines drawn from the circumference of a circle 5 miles in radius centered on the Nantucket, Mass. non-directional radio beacon to a circle 15 miles in radius centered at midway point on a direct line between the Nantucket, Mass. non-directional radio beacon and the Yarmouth, Nova Scotia, radio range station to a circle 5 miles in radius centered on the Yarmouth, Nova Scotia, radio range station, excluding that portion below 2,000 feet except that airspace which lies within the confines of civil airways, and excluding those portions which overlap Warning Areas (W-21, W-95 and W-104)."

(2) (Nantucket, Mass.) is amended to read: "That airspace within tangent lines drawn from the circumference of a circle 5 miles in radius centered on the Nantucket, Mass. non-directional radio beacon to a circle 15 miles in radius centered at the intersection of a line bearing 77° true from the Nantucket non-directional radio beacon and the Western Boundary of the ICAO Control Area, excluding that portion below 2,000 feet except that area which lies within the confines of civil airways."

(3) (Nantucket, Mass.) is amended to read: "That airspace within tangent lines drawn from the circumference of a circle 5 miles in radius centered on the Nantucket, Mass. non-directional radio beacon to a circle 15 miles in radius centered at the intsxn of a line bearing 164° true from the Nantucket non-directional radio beacon and the Western Boundary of the ICAO Control Area, airways, and excluding the portion which overlaps Warning Area (W-105)."

(4) (New York, N. Y.) is amended to read: "That airspace within tangent lines drawn from the circumference of a circle 5 miles in radius centered at the intersection of the east course of the New York (LaGuradia), N. Y. radio range and the NE course of the Mitchel AFB, N. Y. radio range to a circle 5 miles in radius centered at the intersection of the SE course of the Quonset Point, R. I., Navy, radio range and a line bearing 254° true from the Nantucket, Mass. directional radio beacon to a circle 5 miles in radius centered on the Nantucket non-directional radio beacon, excluding that portion below 2,000 feet between the intersection of the east course of the New York (LaGuardia) radio range and the SW course of the Providence, R. I. radio range to the Nantucket non-directional radio beacon."

(5) (Idlewild, N. Y.) is amended to read: "That airspace within 5 miles either side of a direct line extending from the intersection of the SE course of the Mitchel AFB, N. Y. radio range and the Riverhead, N. Y. omnirng 223° true radial to the Nantucket, Mass. non-direc-

tional radio beacon, excluding that portion below 2,000 feet and excluding the portion which overlaps Warning Areas W-105 and W-106."

(6) (Nantucket, Mass.) is amended to read: "That airspace within 5 miles either side of a direct line extending from the Nantucket non-directional radio beacon to the Martha's Vineyard, Mass. non-directional radio beacon."

REPORTING POINTS: (1) Red Civil Airway No. 22 (Mt. Clemens, Mich. to Albany, N. Y.) is amended by deleting the following reporting point: "the intersection of the SE course of the Utica, N. Y. radio range and the W course of the Albany, N. Y. radio range." (Starkville intersection).

(2) OTHER REPORTING POINTS are amended by changing the following reporting points to read:

Cod Intersection: Intersection of a line bearing 77° true from the Nantucket, Mass. non-directional radio beacon and the Western boundary of the New York Oceanic control area.

East Nantucket Intersection: Intersection of a line bearing 77° true from the Nantucket, Mass. non-directional radio beacon and the SE course of the Squantum, Mass. (Navy) rdo rng.

Seal Intersection: Intersection of a line bearing 164° true from the Nantucket, Mass. non-directional radio beacon and the Western boundary of the New York Oceanic control area.

(3) CHANGE the heading of the East Charleston Intersection to read: "Azalea Intersection" and of the East Melbourne Intersection to read: "Balsa Intersection".

(4) DELETE the following reporting point: "Vineyard Intersection - intersection of the W course of the Nantucket, Mass. VHF radio range and the SE course of the Quonset Point, R. I. (Navy) radio range."

DOMESTIC VOR REPORTING POINTS are amended by adding and revoking the following:

ADDITIONS:

(5) Millbury Intersection - intersection of the Hartford, Conn. omnirng 044° true and the Gardner, Mass. omnirng 152° true radials.

(6) Crystal Lake Intersection - intersection of the Allentown, Pa. omnirng 329° true and the Wilkes Barre-Scranton, Pa. omnirng 224° true radials.

(7) Atwater Intersection - the intersection of the Youngstown, Ohio omnirng 240° true and the Cleveland, Ohio omnirng 116° true radials.

(8) Marchand Intersection - intersection of the Youngstown, Ohio omnirng 231° true and the Cleveland, Ohio omnirng 132° true radials.

(9) Stonyfork Intersection - intersection of the Elmira, N. Y. omnirng 212° true and the Bradford, Pa. omnirng 097° true radials.

REVOKE:

(10) Millbury Intersection - intersection of the Hartford, Conn. omnirng 045° true and the Gardner, Mass. omnirng 152° true radials.

(11) Henrietta Intersection - intersection of the Lansing, Mich. omnirng 148° true and the Detroit, Mich. omnirng 276° true radials.

(12) Milford Intersection - intersection of the Lansing, Mich. omnirng 099° true and the Detroit, Mich. omnirng 343° true radials.

DANGER AREA AMENDMENT: The following Danger Area Amendment shall be effective as dated, unless otherwise advised:

AMENDMENT NO. 76 to PART 608-DANGER AREAS
(June 13, 1954)

In Section 608.58 a Guernsey, Wyo., temporary area, is added to read: Location: GUERNSEY (Casper Chart); Description: Beginning at lat. 42-28-00, long. 104-54-00, thence to lat. 42-28-00, long. 104-50-00; thence to lat. 42-20-00, long. 104-44-00; thence to lat 42-18-00, long. 104-44-00; thence to lat 42-18-00, long. 104-50-30; thence to lat 42-22-00, long. 104-53-30, to point of beginning; Altitudes: Surface to 16,000 feet MSL; Time: Daily 0800-1700, from June 13, 1954 through June 26, 1954; Using Agency: Wyoming National Guard.

FLIGHT INFORMATION MANUAL CORRECTIONS: Correct Flight Information Manual, Volume 7, Part 1, dated May 1, 1953 and Part 2, dated June 1, 1953, as follows:

(1) PART 1. Page 21. Change Medford, Oregon CAA telephone number to 2-6523.

(2) PART 2. Page 77. LFR Procedures. Change facility identification of Lynchburg, Va. to read LYH.

ON-REQUEST REPORTING POINTS: Effective immediately the following on-request reporting points are established:

(1) HICKORY INTERSECTION - intersection of Bradford, Pa. VOR 261° magnetic radial with Erie VOR 127° magnetic radial.

(2) BLUE PIKE INTERSECTION - intersection of Clear Creek, Ontario LFR SW course with Erie VOR 283° magnetic radial.

(3) BOLIVOR INTERSECTION - intersection of Akron-Canton ILS south course with Mansfield, Ohio VOR 103° magnetic radial.

(4) EASTON INTERSECTION - intersection of the Gardner, Mass. VOR 141° magnetic radial with Boston ILS south course.

(5) NATICK INTERSECTION - intersection of Gardner, Mass. VOR 128° magnetic radial with Boston VOR en route radial to Millbury intersection.

(6) STARKVILLE INTERSECTION - intersection Albany, N. Y. LFR NW course with Utica LFR SW course.

(7) CHIPPEWA INTERSECTION - intersection of the Cleveland VOR direct radial to Wheeling VOR with Mansfield, VOR 051° magnetic radial and/or Wellington VAR east course.

(8) TROY INTERSECTION - intersection Columbus low frequency range west course with 147° magnetic bearing to Tipp City H facility and/or with Dayton VOR 020° mag. radial.

(9) MARBLEHEAD INTERSECTION - intersection Detroit VOR 147° magnetic radial with Mansfield VOR 349° magnetic radial.

(10) PERU INTERSECTION - intersection Wellington VAR W course with Mansfield VOR 349° magnetic radial.

(11) FORD INTERSECTION - intersection Pittsburgh VOR en route radial to Brookville with 272° magnetic radial to Butler H facility.

(12) BRIGHTON INTERSECTION - intersection Columbus LFR NE course with Wellington VAR west course.

(13) STROUDSBURG INTERSECTION - intersection Wilkes-Barre VOR 156° magnetic radial with Allentown VOR direct radial to Poughkeepsie VOR.

(14) CAMPBELLSVILLE INTERSECTION - intersection Bowling Green VOR 060° magnetic radial with Louisville VOR direct radial to Crossville VOR.

(15) WOONSOCKET INTERSECTION - intersection Norwich VOR direct radial to Boston VOR with extension of Gardner VOR direct radial to Millbury Intersection.

(16) BURNS INTERSECTION - intersection Rochester VOR 192° magnetic radial with Elmira VOR direct radial to Buffalo VOR.

(17) SPERRYVILLE INTERSECTION - intersection Herndon VOR direct radial to Montebello VOR with Front Royal VOR direct radial to Gordonsville VOR.

(18) WOODSTOCK - intersection Hartford VOR direct radial to Millbury Intersection with Westfield LFR SE course.

(19) AVON INTERSECTION - Intersection Rochester VOR 192° magnetic radial with Buffalo VOR 099° magnetic radial.

(20) POTOMAC INTERSECTION - intersection Gordonsville VOR direct radial to Dover VOR with Flat Rock VOR direct radial to Quantico LFR station.

(21) McKENNEY INTERSECTION - intersection of Lawrenceville, Va. VOR 040° magnetic radial with Flat Rock, Va. VOR en route radial on Victor 3.

(22) LYNN INTERSECTION - intersection of Binghamton, N. Y. VOR direct radial to Crystal Lake, Pa. H facility with Wilkes-Barre, Pa. VOR direct radial to Elmira, N. Y. VOR.

(23) COLLY INTERSECTION - intersection of Elmira, N. Y. VOR direct radial to Crystal Lake, Pa. H facility with Wilkes-Barre, Pa. VOR direct radial to Bradford, Pa. VOR.

(24) HARVEY INTERSECTION - intersection of Elmira, N. Y. VOR direct radial to Crystal Lake, Pa. H facility with Wilkes-Barre, Pa. VOR direct radial to Williamsport LFR station.

(25) WIRTZ INTERSECTION - intersection of Pulaski, Va. VOR 097° magnetic radial with Roanoke, Va. LFR south course.

(26) GROTTOES INTERSECTION - intersection of Front Royal, Va. VOR direct radial to Montebello, Va. VOR with Gordonsville, Va. VOR direct radial to Elkins, W. Va. VOR.

(27) LOWELL INTERSECTION - intersection of Gardner, Mass. VOR 094° magnetic radial with Boston, Mass. VOR direct radial to Concord, N. H. VOR.

(28) LEESBURG INTERSECTION - intersection Herndon, Va. 296° magnetic radial with Martinsburg 163° magnetic radial.

(29) PLAINS INTERSECTION - intersection Herndon, Va. 237° magnetic radial with Front Royal, Va. 118° magnetic radial.

(30) ORLEAN INTERSECTION - intersection Herndon, Va. 237° magnetic radial with Front Royal 150° magnetic radial.

(31) GEORGETOWN INTERSECTION - intersection Washington, D. C. 322° magnetic radial with Baltimore, Md. 235° magnetic radial.

(32) RIVERDALE INTERSECTION - intersection Baltimore 225° magnetic radial with Herndon, Va. 111° magnetic radial.

(33) SPRINGFIELD INTERSECTION - intersection Herndon, Va. 152° magnetic radial with Washington 252° magnetic radial.

(34) ELLICOTT CITY INTERSECTION - intersection Washington, D. C. 028° magnetic radial with Baltimore 288° magnetic radial.

(35) SHADYSIDE INTERSECTION - intersection Dover, Del. 252° magnetic radial with Baltimore, Md. 180° magnetic radial.

(36) CHARLOTTE HALL INTERSECTION - intersection Washington, D. C. 159° magnetic radial with Baltimore 193° magnetic radial.

(38) DONCASTER INTERSECTION - intersection Washington, D. C. 203° magnetic radial with Herndon, Va. 159° magnetic radial.

(39) CASANOVA INTERSECTION - intersection Herndon, Va. 216° magnetic radial with Front Royal, Va. 150° magnetic radial.

(40) KENSINGTON INTERSECTION - intersection Herndon, Va. 095° magnetic radial with Washington, D. C. 358° magnetic radial.

(41) LIBERTY INTERSECTION - intersection Patterson LFR west course with 015° magnetic bearing to Dayton ILS LOM and/or with Dayton VOR 202° magnetic radial.

(42) WEST HENRIETTA INTERSECTION - intersection of Rochester, N. Y. VOR 192° magnetic radial with Buffalo, N. Y. LFR east course.

NON-STANDARD HOLDING PATTERNS: Effective immediately the following non-standard holding patterns are established:

(1) PERCH INTERSECTION - direction from holding point - NW; direction of turn - LEFT; time - 2 minutes. Min. Alt. 2300'. (This corrects Airman's Guide, Vol. 9, No. 2, dated April 6, 1954.)

(2) LEESBURG INTERSECTION - direction from holding point - NW; direction of turn - RIGHT on SW side Martinsburg 163° magnetic radial; time - one minute. Min. alt. 3000'.

(3) PLAINS INTERSECTION - direction from holding point - SW; direction of turn - RIGHT on SE side Herndon 237° magnetic radial; time - one minute. Min. Alt. 3,000'.

(4) ORLEAN INTERSECTION - direction from holding point - SW; direction of turn - RIGHT on SE side Herndon 237° magnetic radial; time - one minute. Min. Alt. 4,000'.

(5) GEORGETOWN INTERSECTION - direction from holding point - NW; direction of turn - RIGHT on SW side Washington 322° magnetic radial; time - one minute. Min. Alt. 1800

(6) RIVERDALE INTERSECTION - direction from holding point - NE; direction of turn - RIGHT on NW side Baltimore 225° magnetic radial; time - one minute. Min. alt. 1500'

(7) SPRINGFIELD INTERSECTION - direction from holding point - NW; direction of turn - RIGHT on SW side Herndon 152° magnetic radial; time - one minute. Min alt. 2500'.

(8) ELLICOTT CITY INTERSECTION - direction from holding point - N; direction of turn - LEFT on E side Washington 028° magnetic radial; time - one minute. Min. alt. 3000'.

(9) SHADYSIDE INTERSECTION - direction from holding point - NE; direction of turn - LEFT on SE side Dover 252° magnetic radial: time - one minute. Min. Alt. 3000'.

(10) CHARLOTTE HALL INTERSECTION - direction from holding point - SE; direction of turn - RIGHT on SE side Washington 159° mag. radial; time - one minute. Min. Alt. 3000'.

(11) DONCASTER INTERSECTION - direction from holding point - S; direction of turn - RIGHT on E side Washington 203° magnetic radial; time - one minute. Min. Alt. 3000'.

(12) CASANOVA INTERSECTION - direction from holding point - SW; direction of turn - RIGHT on SE side Herndon 216° magnetic radial; time - one minute. Min. Alt. 3000'.

(13) KENSINGTON INTERSECTION - direction from holding point - E; direction of turn - RIGHT on N side Herndon 095° magnetic radial; time - one minute. Min. Alt. 2000'.

(14) ANDREWS INTERSECTION - direction from holding point - S; direction of turn - RIGHT on E side Baltimore 203° radial; time - one minute. Min. Alt. 1500'.

(15) LISBON INTERSECTION - direction from holding point - W; direction of turn - RIGHT on south side Baltimore 288° radial; time - one minute. Min. Alt. 3000'.

(16) BALTIMORE - hold at Baltimore VOR NE (052° radial) on SE side with left turns; min. alt. 2000'.

AIR ROUTE TRAFFIC CONTROL BOUNDARY AND FLIGHT ADVISORY AREA BOUNDARY AMENDMENTS: Effective immediately unless otherwise shown.

(1) Effective May 1, 1954, the Boston ARTC boundary on Victor 104 will be 15 miles NW Massena VOR station.

(2) The Atlanta-Cincinnati ARTC boundary is located 25 miles south of the Highway Intersection. The Flight-Advisory boundary is as follows: Beginning at the west edge of of Red Civil Airway No. 27, at a point 25 miles south of the Corbin, Ky. VAR station thence SW to a point 25 miles south of the Highway Intersection on VOR Civil Airway No. 51; thence SW to 36-15N, 85-45W.

(3) The Atlanta-Memphis Flight Advisory Boundary is established: Beginning at 36-15N, 85-45W; thence SE to the north edge of Green civil airway No. 5 at a point 10 miles SE of the Smithville, Tenn. LF range station.

(4) The Memphis-Cincinnati Flight Advisory Boundary is established: Beginning at 36-15N, 85-45W, thence north to the east edge of VOR civil airway No. 5E at a point 25 miles NE of the Bowling Green, Ky. VOR station.

(5) The Atlanta-Washington ARTC boundary is established 20 miles east of the Pulaski, Va. VOR station. The Flight-Advisory boundary is as follows: Beginning at the south edge of VOR civil airway No. 136 at a point 20 miles east of the Pulaski, Va. VOR station, thence southeast to 36-32-30N, 79-47W.

(6) Effective April 24, 1954, the Tampa ARTC will assume control of all IFR traffic operating within control areas from Tampa to the following boundaries: 25 miles SE of Cross City radio range stn on Civil Airway Red 25 and Victor 7; 50 miles NE of Tampa Radio Range station on Civil Arwy Red 47; 25 miles SE of Labelle Intsxn on Civil Arwy Red 101; 25 miles SE of Ft. Myers radio range station on Civil Airway Red 25 and Victor 7; 15 miles S of Sanibel Intsxn (SW crs Ft. Myers rdo rng and N crs of Key West rdo rng) on CA 1228; New Orleans Oceanic Control Area boundary on CA 1226; and including Ft. Myers and Tampa control area extensions to the boundary as specified foregoing on CA 1228. Concurrently TAMPA FLIGHT ADVISORY AREA will extend from New Orleans Oceanic Control Area Boundary and lat. 28-45N thence to 25 miles SE of Cross City, thence following the east boundary of Tampa control area to 25 miles SE of Labelle Intsxn, thence to 25 miles SE of Ft. Myers, thence to 15 miles S of Sanibel Intsxn, thence to New Orleans Oceanic Control Area Boundary and lat. 26-30N, thence following the E boundary of New Orleans Oceanic Control Area to point of origin. Concurrently radar departure procedures will be inaugurated by Tampa center and radar departure service will be provided Tampa Intn'l Arpt, MacDill AFB, Pinellas Co. Intn'l Arpt, Knight Arpt and Whitted Arpt. Rdo freqs of Tampa Center are assigned as follows: civil acft enroute 118.1 mc, arrival ctl 118.5 mc, deptr ctl 126.5 mc, military acft enroute 137.88 mc or 363.8 mc; arrival ctl 136.8,255.4 mc or 335.5 mc, deptr ctl 137.88 or 379.4 mc; GCA final to MacDill 134.1 or 289.4 mc. Navy freq. 142.02 mc avail. for GCA to MacDill. In addition, Tampa center trans. 116.5 (Tampa VOR) and guards 122.5 mc and 3023.5 kc. Pilots will be advised in each case the freq. to be utilized.

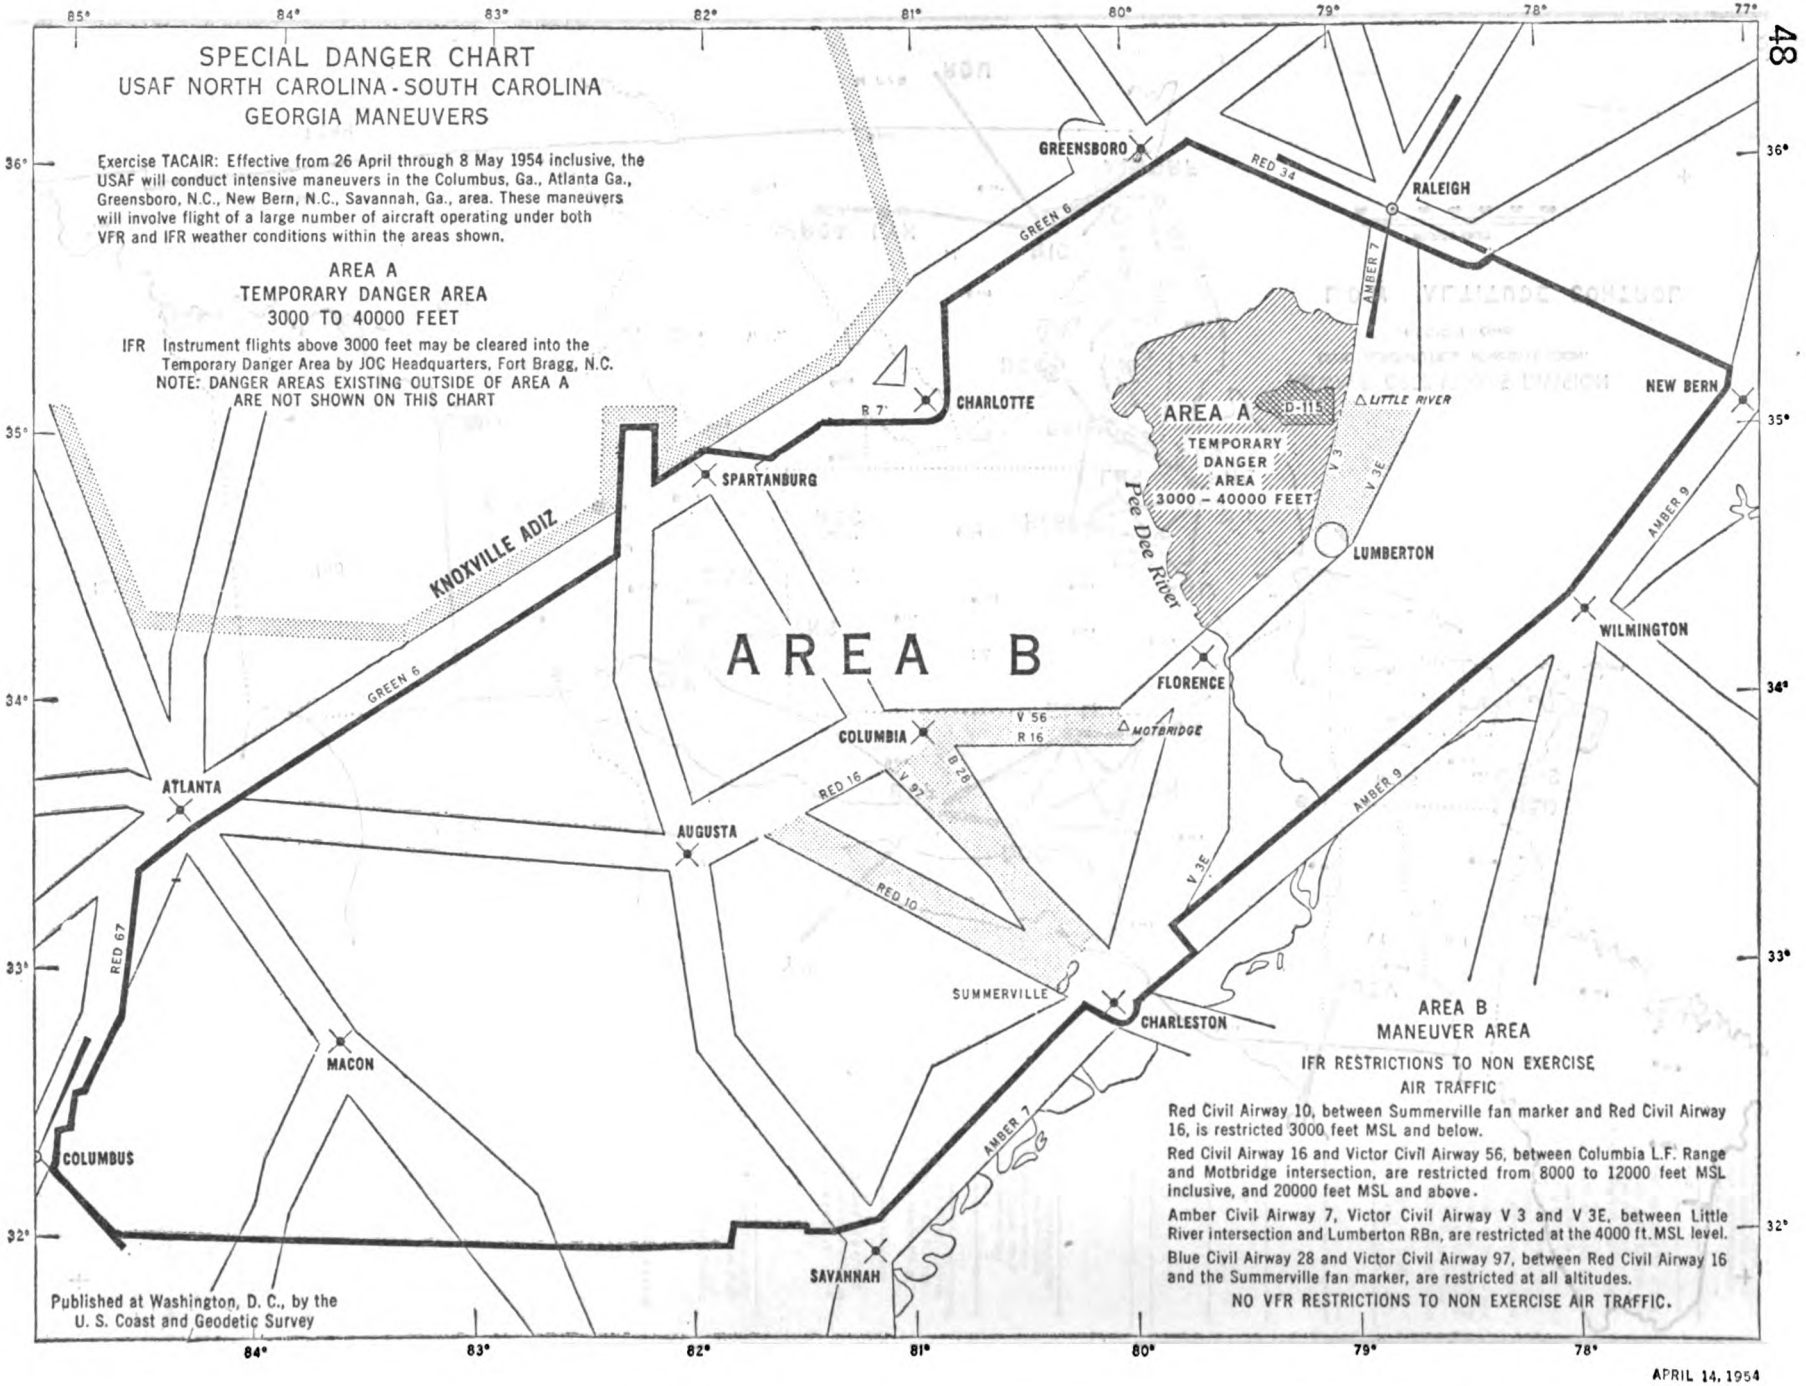
SPECIAL DANGER CHART
USAF NORTH CAROLINA - SOUTH CAROLINA GEORGIA MANEUVERS

Exercise TACAIR: Effective from 26 April through 8 May 1954 inclusive, the USAF will conduct intensive maneuvers in the Columbus, Ga., Atlanta Ga., Greensboro, N.C., New Bern, N.C., Savannah, Ga., area. These maneuvers will involve flight of a large number of aircraft operating under both VFR and IFR weather conditions within the areas shown.

AREA A
TEMPORARY DANGER AREA
3000 TO 40000 FEET

IFR Instrument flights above 3000 feet may be cleared into the Temporary Danger Area by JOC Headquarters, Fort Bragg, N.C.
NOTE: DANGER AREAS EXISTING OUTSIDE OF AREA A ARE NOT SHOWN ON THIS CHART



AREA B
MANEUVER AREA

IFR RESTRICTIONS TO NON EXERCISE AIR TRAFFIC

Red Civil Airway 10, between Summerville fan marker and Red Civil Airway 16, is restricted 3000 feet MSL and below.

Red Civil Airway 16 and Victor Civil Airway 56, between Columbia L.F. Range and Motbridge intersection, are restricted from 8000 to 12000 feet MSL inclusive, and 20000 feet MSL and above.

Amber Civil Airway 7, Victor Civil Airway V 3 and V 3E, between Little River intersection and Lumberton RBn, are restricted at the 4000 ft. MSL level.

Blue Civil Airway 28 and Victor Civil Airway 97, between Red Civil Airway 16 and the Summerville fan marker, are restricted at all altitudes.

NO VFR RESTRICTIONS TO NON EXERCISE AIR TRAFFIC.

NOTICES TO AIRMEN

SPECIAL NOTICES

✓ Indicates New or Revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Information, Attention, W-52, CAA, Washington 25, D. C.)

Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

VHF INSACS-TO-PRIVATE AIRCRAFT CHANNELS: The national VHF channel for transmission from INSACS-to-private aircraft, 122.2 mc was partially implemented beginning August 1, 1951. (The companion aircraft-to-INSACS frequency is 122.1 mc). Eventually all INSACS will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACS which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call.

When an INSACS is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACS have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° of azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

✓ AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations and outer compass locators).

Omniranges and outer compass locators where voice identification is functioning are designated in the ANRA pages by an asterisk (1) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification; e. g. Long Beach omni (voice) .-.. --. -... (LGB in Code).

NEW AIR TRAFFIC CLEARANCE PHRASEOLOGY ADOPTED: The phrase "VIA FLIGHT PLANNED ROUTE" has been adopted for use in air traffic clearances and may be used to replace the detailed description of any portion of the route of flight that is identical to the route filed by the pilot. IFR flight plans filed by pilots must contain the complete route of flight and must be relayed to air traffic control unchanged in order for this phraseology to be successfully used.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occurring through accidental connection of a pilot's headset to the wrong receiver The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

INTERCEPTION PATTERN FOR DAY-VISUAL IDENTIFICATION OF AIRCRAFT: The Air Defense Command advises that the "Interception Pattern for Day-Visual Identification of Aircraft", as published in the Flight Information Manual (Volume 7, Part 1, May 1953) page 101, has been modified to eliminate the initial pass ahead of the intercepted aircraft. The new procedure is graphically illustrated on page 88 of Airguide, Vol. 9, No. 1 (March 23, 1954).

Attention is directed to the following excerpts from the text accompanying the new pattern:

"Fighter-interceptor pilots are ordered to make every effort to prevent startling the intercepted aircraft air crews or passengers.

Ordered intercepts are essential to the defense of the country and will continue as required. Close adherence to Part 620 of the Regulations of the Administrator by all pilots will minimize the necessity for intercepts. Deviations result in unknown or suspicious tracks on air defense radars and intercepts must be ordered for identification.

Pilots being intercepted must hold a steady course and altitude. The intercept pattern has been developed and interceptor pilots well trained in its use to identify aircraft without creating additional hazard. Taking evasive action precludes precise following of the intercept pattern and creates a collision hazard. Also, pilots are urged not to shine Aldis lamps or other lights into the interceptor cockpit at night, blinding the pilot and creating a hazard.

The Air Defense Command will investigate all reports of apparent flagrant disregard for the safety of intercepted aircraft on the part of interceptor pilots and take appropriate disciplinary action."

✓ **VOR RECEIVER CHECK SIGNALS:** Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operation of the airborne system. These provisions consist of three different methods: (a) a radiated test signal consisting of a single radial; (b) certified check points on the airport surface; or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. The resultant indication should be either 0° or 180° (dependent upon the setting of the "To-From" indicator) with the omnibearing selector set at 0° and the flight path deviation indicator (FPDI) centered. Should the VOR receiver be of the automatic indicating type, the indication should be either 0° or 180° dependent upon the particular type of sensing designed into the receiver. Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of ± 4° be indicated through use of the ground check or ± 6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. Caution, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of April 30, 1954, check points or facilities have been established at the following airports (listed under city name):

✓AIRMAN'S GUIDE CORRECTIONS: Correct Airman's Guide, Volume 9, Number 3, dated April 20, 1954 as follows:

(1) Page 31 - item (2). LEESBURG INTERSECTION - change to read: direction from holding point - NW; direction of turn - RIGHT on SW side Herndon 296° magnetic radial; time - one minute. Min. Alt. 3000'.

(2) Page 31 - item (10). CHARLOTTE HALL INTERSECTION - change to read: direction from holding point - SE; direction of turn - RIGHT on NE side Washington 159° magnetic radial; time - one minute. Min. Alt. 3000'.

✓DANGER AREA AMENDMENT: The following Danger Area Amendment shall be effective as dated, unless otherwise advised:

AMENDMENT NO. 77 to PART 608 - DANGER AREAS

(May 20, 1954)

(1) In Section 608.54, the Tangier Island, Virginia, area (D-88), published on December 12, 1951, in 16 F. R. 12502, is amended by changing the "Using Agency" column to read: "NAOTS Chincoteague".

(2) In Section 608.19, the Townsend, Georgia, area (D-339), published on July 12, 1951, in 16 F. R. 6745 is amended by changing the "Designated Column" to read: "Surface to 50,000 feet MSL".

(3) In Section 608.32, a Black Creek, Miss., area (D-452) is added to read: Location: Black Creek (Mobile); Description: Within a 3 mile radius of a point at lat. 31-06-30, long. 89-06-15; Altitudes: Surface to 10,000' MSL; Time: Daylight hours daily - VFR only June, July and August of each year; Using Agency: Air National Guard, Gulfport, Miss.

(4) In Section 608.32, A Gulfport, Miss. area (D-453) is added to read: Location: Gulfport, Miss. (Mobile); Description: Starting at a point at lat. 30-13-30, long. 88-01-30, thence south to lat. 29-36-10, long. 88-01-30; thence northwest to lat. 29-43-30, long. 88-54-00; thence north to lat. 30-05-30, long. 88-54-00; thence to point of beginning, excluding that portion more than 3 nautical miles from the Mississippi shore; Altitudes: Surface to unlimited; Time: Daylight hours daily during June, July and August of each year; Using Agency: Air National Guard, Gulfport, Miss.

✓CIVIL AIRWAY, CONTROL AREA EXTENSION, CONTROL ZONES, CONTROL AREAS AND REPORTING POINT AMENDMENTS: Effective May 25, 1954, civil airways, control area extensions, control zones, control areas and reporting point amendments, are amended in whole or in part as follows:

CIVIL AIRWAYS: (1) VOR civil airway No. 1 is amended by changing the caption to read "(Charleston, S. C. to New York, N. Y.)" and by adding a new first portion to read: "From the Charleston, S. C. omnirng station to the Myrtle Beach, S. C. omnirng station."

(2) VOR civil airway No. 3 (Key West, Fla. to Bangor, Me.) is amended by changing all before the Lumberton, N. GROUND CONTROLLED APPROACH SYSTEM PROCEDURES

When a GCA instrument approach is conducted at the below named airport(s), it shall be in accordance with the following instrument approach procedure(s), unless an approach is conducted in accordance with a different procedure authorized by the Administrator for such airport(s). Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the ground controller. From initial contact with GCA to final authorized landing minimums, the instructions of the GCA controller are mandatory except when (A) visual reference with the ground is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach.

INSACS = Interstate Airway Communications Station/s (CAA)

VHF OMNI-RANGE: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSACS. (C) The station identification is monitored continuously by the communicator at the associated INSACS. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSACS. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category I are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored soley through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSACS, and located too distant from INSACS to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180", indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

Cl. . . . Control Tower, (City, County, Private, etc.)
D. . . Distantly controlled

DME. . . . Distance Measuring Equipment
FM. . . . . VHF fan marker (100 watts)
GCA. . . . Ground Controlled approach system
H. . . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . . Instrument Landing System (voice on localizer channel)
J. . . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . . . VHF fan marker, low powered (5 watts)
LMM. . Compass locator station when installed at middle marker site
LOM. . . . Compass locator when installed at outer marker site
LVOR. . . Low power VOR (with standby equipment)
MH. . . . . Non-directional radio beacon (homing) power less than 50 watts
ML. . . . Range (loop radiators), power less than 50 watts
MM. . . VHF middle marker
MOR. . . . Low frequency omni-drectional range
MRA. . . . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . . . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . . . VHF outer marker
P. . . . . Point-to-Point radio
RA. . . . . Range (adcock, vertical radiators), power 150 watts or more
RAPCON Radar Approach Control Center.
RL. . . Range (loop radiators), power 150 watts or more
S. . . . . Simultaneous range, homing and voice signals available. Inclusion suffix "W" indicates range and homing signals only
T. . . . Teletype
TVOR. . Low power VOR (no standby equipment) located on airport
TX. . . . Principal teletype
V. . . Additional VHF voice feature on other than range frequency
VAR. . . Visual-aural VHF range
VOR. . . . VHF omni-directional range (omni-range)
W. . . . . Without voice facilities on range frequency
Z. . . . . VHF station location marker at a range station

NOTES

1. Range courses are magnetic in-bearings
2. All CAA MH facilities operate continuously unless cited as follows: (on req)
3. All CAA ranges operate continuously. Those which are not manned continuously are cited in the remarks column with hours of operation in parentheses, e.g., (6-24)
4. VHF and LF/LMF ranges listed with the same identifier are controlled by the same INSACS. Due to space limitations the DTV and communication frequencies which are listed with the LF/LMF facility are not repeated with the VOR facility

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

RADAR AVAILABLE : How and Where

(5-18-54)

PAR = Precision Approach Radar. ASR = Airport Surveillance Radar. GCA = Ground Controlled Approach - Military Equivalent of Combined ASR and PAR Equipment. ARSR = Air Route Surveillance Radar. RAPCON = Radar Approach Control Center.

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

RADAR ARRIVAL AND DEPARTURE CONTROL - Radar is utilized by certain radar equipped facilities to control the flight paths of arriving or departing IFR aircraft for the purpose of expediting the flow of traffic. Aircraft operating on IFR flight plans will be afforded a minimum of three miles horizontal separation unless standard non-radar vertical, lateral or longitudinal separation exists. This should not be confused with Ground Controlled Approach (GCA) which is an instrument approach aid.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums associated runways and GCA procedures are listed in the Flight Information Manual.

RAPCON - At certain locations, the surveillance portion of Military RAPCONS is operated by the CAA and service is available to all aircraft. These are listed below as well as in "Air Navigation Radio Aids" section under proper location.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.
Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.
Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.
Emergency: When a receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.
After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible Civil Minimums at military installations established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums. Navy units are prepared to transmit on HF from 2,000 to 18,000 kc and receive any frequency from 1,500 to 9,050 kc to aid any plane in emergency.

RADAR FLIGHT ADVISORY SERVICE: This service to aircraft encountering severe weather condition may be obtained by requesting radar advisory through an appropriate ground station or direct ARTC communication. ARTC will determine if service can be provided and will request pilot to change to appropriate frequency for direct communication with radar Radar station will be identified by "THIS IS AIR FORCE RADAR ADVISORY." All suggested vectors to circumnavigate storm areas will be of advisory nature and do not relieve pilot of responsibility for safety of aircraft. If advisory service cannot be furnished for any reason, the procedure word "UNABLE" will be used. This will terminate radar advisory service to the aircraft without further explanation. This service will be available in the following ARTC Flight Advisory Areas: Chicago, St. Louis, Minneapolis, Kansas City, Albuquerque San Antonio, Ft. Worth, Oakland and the Knoxville Air Defense Identification Zone

CAA OPERATED RADAR UNITS

NOTE: Transmitting frequencies below 118 mc. are not guarded. Other transmitting frequencies listed are guarded plus 122.5 mc and 3023.5 kc. Transmit and guard 121.5 mc all locations.

✓ Indicates New or Revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Information, Attention, W-52, CAA, Washington 25, D. C.)

Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

VHF INSACS-TO-PRIVATE AIRCRAFT CHANNELS: The national VHF channel for transmission from INSACS-to-private aircraft, 122.2 mc was partially implemented beginning August 1, 1951. (The companion aircraft-to-INSACS frequency is 122.1 mc). Eventually all INSACS will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACS which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call.

When an INSACS is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACS have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° of azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations and outer compass locators).

Omniranges and outer compass locators where voice identification is functioning are designated in the ANRA pages by an asterisk (1) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification; e. g. Long Beach omni (voice) .-.. --. -... (LGB in Code).

NEW AIR TRAFFIC CLEARANCE PHRASEOLOGY ADOPTED: The phrase "VIA FLIGHT PLANNED ROUTE" has been adopted for use in air traffic clearances and may be used to replace the detailed description of any portion of the route of flight that is identical to the route filed by the pilot. IFR flight plans filed by pilots must contain the complete route of flight and must be relayed to air traffic control unchanged in order for this phraseology to be successfully used.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occurring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

INTERCEPTION PATTERN FOR DAY-VISUAL IDENTIFICATION OF AIRCRAFT: The Air Defense Command advises that the "Interception Pattern for Day-Visual Identification of Aircraft", as published in the Flight Information Manual (Volume 7, Part 1, May 1953) page 101, has been modified to eliminate the initial pass ahead of the intercepted aircraft. The new procedure is graphically illustrated on page 88 of Airguide, Vol. 9, No. 1 (March 23, 1954).

Attention is directed to the following excerpts from the text accompanying the new pattern:

"Fighter-interceptor pilots are ordered to make every effort to prevent startling the intercepted aircraft air crews or passengers.

Ordered intercepts are essential to the defense of the country and will continue as required. Close adherence to Part 620 of the Regulations of the Administrator by all pilots will minimize the necessity for intercepts. Deviations result in unknown or suspicious tracks on air defense radars and intercepts must be ordered for identification.

Pilots being intercepted must hold a steady course and altitude. The intercept pattern has been developed and interceptor pilots well trained in its use to identify aircraft without creating additional hazard. Taking evasive action precludes precise following of the intercept pattern and creates a collision hazard. Also, pilots are urged not to shine Aldis lamps or other lights into the interceptor cockpit at night, blinding the pilot and creating a hazard.

The Air Defense Command will investigate all reports of apparent flagrant disregard for the safety of intercepted aircraft on the part of interceptor pilots and take appropriate disciplinary action."

(2) Page 6. Under Non-Standard Holding Patterns, item (3). Should read: Direction from holding point - East. Item (6). Should read: Direction from holding point - East.

V VOR RECEIVER CHECK SIGNALS: Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operation of the airborne system. These provisions consist of three different methods: (a) a radiated test signal consisting of a single radial; (b) certified check points on the airport surface; or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. The resultant indication should be either 0° or 180° (dependent upon the setting of the "To-From" indicator) with the omnibearing selector set at 0° and the flight path deviation indicator (FPDI) centered. Should the VOR receiver be of the automatic indicating type, the indication should be either 0° or 180° dependent upon the particular type of sensing designed into the receiver. Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of ± 4° be indicated through use of the ground check or ± 6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. Caution, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of May 14, 1954, check points or facilities have been established at the following airports (listed under city name):

Temporary Controlled Firing Area - Jordan Narrows, Utah

Firing to cease upon approach of aircraft over firing area.

Designated Altitude	-	Surface to 15,000 ft. above terrain.
Time of Use	-	Daylight hours only during period of June 6-20, 1954 inclusive.
Activity	-	Artillery firing.
Using Agency	-	Utah National Guard.

Firing to be conducted in accordance with the following restrictions:

1. Visual surveillance will be continuously maintained over the entire area by safety officers during firing operations to detect approaching aircraft and communication will be established with gun positions to order cessation of firing upon the approach of aircraft.

2. Firing will be conducted only when there are no clouds below 16,000 ft. greater than scattered clouds and when visibility is at least 10 miles.

3. No projectile shall enter or pass through any clouds.

4. All firing to be conducted to the west.

5. Picket aircraft in constant communication with the gun positions shall patrol the boundaries of the area during firing activities and shall warn the firing control officer of the approach of aircraft.

6. The nearest Civil Aeronautics Administration Interstate Airways Communication Station (Salt Lake City INSAC) shall be advised at least 24 hours in advance of firing activities in order that adequate NOTAMS may be issued. During all scheduled periods of firings, as evidenced by the issuance of a NOTAM, the Civil Aeronautics Administration Interstate Airways Communication Stations at Salt Lake City and Delta, Utah will suggest to all aircraft contacting them that the aircraft follow the east side of the south course of Salt Lake Radio Range while in the vicinity of the Controlled Firing Area.

7. Radar surveillance of the Jordan Narrows Valley will be provided during all periods of firing.

8. Provision will be made for the placarding of all airports in the vicinity of Jordan Narrows, particularly small airports, sufficiently in advance to warn area and transient private pilots of the controlled firing area and the dates of its utilization.

9. Notice of firing will be broadcast by INSACS in the area at the time weather forecasts are transmitted.

VOL. 9, NO. 6 ..... JUNE 1, 1954

The AIRMAN'S GUIDE is issued every two weeks. This issue includes all data on record as of 0001 E.S.T. on the above date. For later information consult Teletype NOTAMS.

U. S. DEPARTMENT OF COMMERCE
CIVIL AERONAUTICS ADMINISTRATION
OFFICE OF AVIATION INFORMATION

✓ Indicates New or Revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Information, Attention, W-52, CAA, Washington 25, D. C.)

Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

VHF INSACS-TO-PRIVATE AIRCRAFT CHANNELS: The national VHF channel for transmission from INSACS-to-private aircraft, 122.2 mc was partially implemented beginning August 1, 1951. (The companion aircraft-to-INSACS frequency is 122.1 mc). Eventually all INSACS will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACS which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call.

When an INSACS is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACS have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° of azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations and outer compass locators).

Omniranges and outer compass locators where voice identification is functioning are designated in the ANRA pages by an asterisk (1) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification; e. g. Long Beach omni (voice) .-.. --. -... (LGB in Code).

NEW AIR TRAFFIC CLEARANCE PHRASEOLOGY ADOPTED: The phrase "VIA FLIGHT PLANNED ROUTE" has been adopted for use in air traffic clearances and may be used to replace the detailed description of any portion of the route of flight that is identical to the route filed by the pilot. IFR flight plans filed by pilots must contain the complete route of flight and must be relayed to air traffic control unchanged in order for this phraseology to be successfully used.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occurring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

INTERCEPTION PATTERN FOR DAY-VISUAL IDENTIFICATION OF AIRCRAFT: The Air Defense Command advises that the "Interception Pattern for Day-Visual Identification of Aircraft", as published in the Flight Information Manual (Volume 7, Part 1, May 1953) page 101, has been modified to eliminate the initial pass ahead of the intercepted aircraft. The new procedure is graphically illustrated on page 88 of Airguide, Vol. 9, No. 1 (March 23, 1954).

Attention is directed to the following excerpts from the text accompanying the new pattern:

"Fighter-interceptor pilots are ordered to make every effort to prevent startling the intercepted aircraft air crews or passengers.

Ordered intercepts are essential to the defense of the country and will continue as required. Close adherence to Part 620 of the Regulations of the Administrator by all pilots will minimize the necessity for intercepts. Deviations result in unknown or suspicious tracks on air defense radars and intercepts must be ordered for identification.

Pilots being intercepted must hold a steady course and altitude. The intercept pattern has been developed and interceptor pilots well trained in its use to identify aircraft without creating additional hazard. Taking evasive action precludes precise following of the intercept pattern and creates a collision hazard. Also, pilots are urged not to shine Aldis lamps or other lights into the interceptor cockpit at night, blinding the pilot and creating a hazard.

The Air Defense Command will investigate all reports of apparent flagrant disregard for the safety of intercepted aircraft on the part of interceptor pilots and take appropriate disciplinary action."

✓ DANGER AREA PENETRATION: Information received from military authorities presents compelling evidence that civilian pilots are frequently penetrating danger areas without prior permission of the appropriate military authorities. The activities engaged in by the military within these areas present a real hazard to aircraft, since they encompass serial gunnery, air-to-ground and ground-to- air gunnery, anti-aircraft test firing, rocket firing, bombing, and ordnance testing.

Accordingly, the Office of Aviation Safety urges that all pilots consider the consequences to themselves and to their passengers of unnecessary exposure to such hazards. It is of prime importance to the safe conduct of a flight that the pilot carefully plan the routes so as to eliminate all possibility of inadvertently penetrating any danger area, and to obtain prior permission from the military before willfully entering such area.

✓ VOR RECEIVER CHECK SIGNALS: Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operation of the airborne system. These provisions consist of three different methods: (a) a radiated test signal consisting of a single radial; (b) certified check points on the airport surface; or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. The resultant indication should be either 0° or 180° (dependent upon the setting of the "To-From" indicator) with the omnibearing selector set at 0° and the flight path deviation indicator (FPDI) centered. Should the VOR receiver be of the automatic indicating type, the indication should be either 0° or 180° dependent upon the particular type of sensing designed into the receiver. Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of ± 4° be indicated through use of the ground check or ± 6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. Caution, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of May 28, 1954, check points or facilities have been established at the following airports (listed under city name):

LOCATION IDENTIFIERS: The following assignments and chantes affect the use of location identifiers:

BNW	Boone, Iowa, Boone Airport (assignment)
MYL	McCall, Idaho, McCall Airport (reassignment)
PUO	Pueblo, Colo., Pueblo Airport #2 (reassignment)
RAL	Riverside, Calif., Riverside Airport (name change)

PILOTS WARNED OF MAINTENANCE IN PROGRESS AT NAVAIDS: After June 14, 1954, during routine or emergency maintenance periods, which have been advertised in the usual manner, identification will be removed from certain Federal Airways System Navaids, namely, ILS Localizers, VHF Ranges (VOR, TVOR & VAR), and L/MF Ranges. This new policy relative to signaling pilots that maintenance work is in progress at these Navaids was set forth in Federal Airways All Region letter No. 268, dated May 14, 1954, entitled "Removal of Identification During Maintenance Periods." The removal of identification serves as an additional warning to pilots that the facility has been officially taken over by "Maintenance" for tune-up or repair and may be unreliable even though on the air intermittently or constantly. This procedure is not to be considered in any way as a substitution for the official NOTAM covering "maintenance shutdown" but instead, is an adjunct to same as outlined above.

GROUND CONTROLLED APPROACH SYSTEM PROCEDURES

When a GCA instrument approach is conducted at the below named airport(s), it shall be in accordance with the following instrument approach procedure(s), unless an approach is conducted in accordance with a different procedure authorized by the Administrator for such airport(s). Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the ground controller. From initial contact with GCA to final authorized landing minimums, the instructions of the GCA controller are mandatory except when (A) visual reference with the ground is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach.

CAUTION: [illegible] area. Pilots using this facility shall, as soon as practicable advise facility of their position, altitude, ETA, and intentions, and there after determine that adequate separation exists from other reported users of navigational facilities in the area. In instances where other aircraft have previously contacted facility, hold between facility and a point two minutes out on final approach course at least 1,000 feet above procedure turn altitude and 1,000 feet above previously reported traffic until advised that aircraft making approach has landed. Keep facility advised at all times of changes in altitude and position in order that other aircraft may also receive this information.

NOTE. Bearings, headings, courses are magnetic. Distances are in statute miles. Elevations and altitudes are in feet MSL. Ceilings are in feet above airport elevation.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

INSACS = Interstate Airway Communications Station/s (CAA)

VHF OMNI-RANGE: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSACS. (C) The station identification is monitored continuously by the communicator at the associated INSACS. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSACS. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category I are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored soley through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSACS, and located too distant from INSACS to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180", indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . . . Approach Control Tower, CAA (transmits on voice channel of associated ranges and ILS in addition to frequencies listed)
B. . . . . Scheduled Broadcast Station (broadcasts weather at 15 and 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . . Control Tower, CAA
CI. . . . . Control Tower, (City, County, Private, etc.)
D. . . . . Distantly controlled
DME. . . . Distance Measuring Equipment
FM. . . . . VHF fan marker (100 watts)
GCA. . . . Ground Controlled approach system
H. . . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . . Instrument Landing System (voice on localizer channel)
J. . . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . . . VHF fan marker, low powered (5 watts)
LMM. . . Compass locator station when installed at middle marker site
LOM. . . . Compass locator when installed at outer marker site
LVOR. . . Low power VOR (with standby equipment)
MH. . . . . Non-directional radio beacon (homing) power less than 50 watts
ML. . . . . Range (loop radiators), power less than 50 watts
MM. . . . VHF middle marker
MOR. . . . Low frequency omni-drectional range
MRA. . . . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . . . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . . . VHF outer marker
P. . . . . Point-to-Point radio
RA. . . . . Range (adcock, vertical radiators), power 150 watts or more
RAPCON Radar Approach Control Center.
RL. . . . . Range (loop radiators), power 150 watts or more
S. . . . . Simultaneous range, homing and voice signals available. Inclusion suffix "W" indicates range and homing signals only
T. . . . . Teletype
TVOR. . . Low power VOR (no standby equipment) located on airport
TX. . . . . Principal teletype
V. . . . . Additional VHF voice feature on other than range frequency
VAR. . . Visual-aural VHF range
VOR. . . . VHF omni-directional range (omni-range)
W. . . . . Without voice facilities on range frequency
Z. . . . . VHF station location marker at a range station

NOTES

1. Range courses are magnetic in-bearings
2. All CAA MH facilities operate continuously unless cited as follows: (on req)
3. All CAA ranges operate continuously. Those which are not manned continuously are cited in the remarks column with hours of operation in parentheses, e.g., (6-24)
4. VHF and LF/LMF ranges listed with the same identifier are controlled by the same INSACS. Due to space limitations the DTV and communication frequencies which are listed with the LF/LMF facility are not repeated with the VOR facility

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

RADAR AVAILABLE : How and Where

(6-15-54)

PAR = Precision Approach Radar. ASR = Airport Surveillance Radar. GCA = Ground Controlled Approach - Military Equivalent of Combined ASR and PAR Equipment. ARSR = Air Route Surveillance Radar. RAPCON = Radar Approach Control Center.

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway The final approach flight path on a precisionscope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

RADAR ARRIVAL AND DEPARTURE CONTROL - Radar is utilized by certain radar equipped facilities to control the flight paths of arriving or departing IFR aircraft for the purpose of expediting the flow of traffic. Aircraft operating on IFR flight plans will be afforded a minimum of three miles horizontal separation unless standard non-radar vertical, lateral or longitudinal separation exists. This should not be confused with Ground Controlled Approach (GCA) which is an instrument approach aid.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

RAPCON - At certain locations, the surveillance portion of Military RAPCONS is operated by the CAA and service is available to all aircraft. These are listed below as well as in "Air Navigation Radio Aids" section under proper location.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.
Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.
Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.
Emergency: When a receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at the pilot's discretion.
After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible
Civil Minimums at military installations established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums. Navy units are prepared to transmit on HF from 2,000 to 18,000 kc and receive any frequency from 1,500 to 9,050 kc to aid any plane in emergency.

RADAR FLIGHT ADVISORY SERVICE: This service to aircraft encountering severe weather condition may be obtained by requesting radar advisory through an appropriate ground station or direct ARTC communication. ARTC will determine if service can be provided and will request pilot to change to appropriate frequency for direct communication with radar. Radar station will be identified by "THIS IS AIR FORCE RADAR ADVISORY." All suggested vectors to circumnavigate storm areas will be of advisory nature and do not relieve pilot of responsibility for safety of aircraft. If advisory service cannot be furnished for any reason, the procedure word "UNABLE" will be used. This will terminate radar advisory service to the aircraft without further explanation. This service will be available in the following ARTC Flight Advisory Areas: Chicago, St. Louis, Minneapolis, Kansas City, Albuquerque San Antonio, Ft. Worth, Oakland , Denver , Great Falls and the Knoxville Air Defense Identification Zone.

CAA OPERATED RADAR UNITS

NOTE: Transmitting frequencies below 118 mc. are not guarded. Other transmitting frequencies listed are guarded plus 122.5 mc and 3023.5 kc. Transmit and guard 121.5 mc all locations.
